Lee Lyman, 1994-07-07 Taphonomy studies the transition of organic matter from the biosphere into the geological record It is particularly relevant to zooarchaeologists and paleobiologists who analyse organic remains in the archaeological record in an attempt to reconstruct hominid subsistence patterns and paleoecological conditions In this user friendly encyclopedic reference volume for students and professionals R Lee Lyman a leading researcher in taphonomy reviews the wide range of analytical techniques used to solve particular zooarchaeological problems illustrating these in most cases with appropriate examples He also covers the history of taphonomic research and its philosophical underpinnings Logically organised and clearly written the book is an important update on all previous publications on archaeological faunal remains Ouaternary Extinctions Paul S. Martin, Richard G. Klein, 2022-01-04 What caused the extinction of so many animals at or near the end of the Pleistocene Was it overkill by human hunters the result of a major climatic change or was it just a part of some massive evolutionary turnover Questions such as these have plagued scientists for over one hundred years and are still being heatedly debated today Quaternary Extinctions presents the latest and most comprehensive examination of these questions Geological Magazine May be regarded as a kind of standard encyclopedia for Pleistocene vertebrate paleontology for years to come American Scientist
