**Neuroendocrine Correlates of Sleep/Wakefulness** Daniel P. Cardinali, S. R. Pandi-Perumal, 2010-03-14 As the title suggests and unlike other existing books on sleep medicine Neuroendocrine Correlates of Sleep Wakefulness will be devoted primarily to endocrine regulation of the behavioral state control It will address a wide spectrum of sleep wakefulness phenomena both animals and humans including pathogenesis diagnosis and management From molecular biology to applied clinical therapy sleep research has been transformed in the last few years from a research backwater to an important interdisciplinary field Anyone who regularly reads the literature on sleep biological rhythms or neuroendocrinology is aware that one of the subspecialties within sleep medicine the neuroendocrine correlates of sleep wakefulness has in particular experienced a growth rate that is even faster than that of the field as a whole To a significant extent this has been due to the introduction of new research technologies The widespread adoption of a range of new methods in sleep research has opened a window into activities at the cellular and molecular level which previously had been tightly closed Consequently these activities are being characterized with a degree of precision and sensitivity that is without precedent This volume invites the reader to explore the new vistas that have been opened onto the neuroendocrine frontier of sleep medicine The editors have selectively identified a number of key articles having a citation frequency which is considerably above the norm or which otherwise have contributed importantly to defining the neuroendocrine perspective This new volume on Neuroendocrine Correlates of Sleep Wakefulness is an up to date resource of research summaries and reviews written by major contributors to the fields of sleep biological rhythms and neuroendocrinology Its coverage is broad and its basic and clinical science reviews are detailed In this volume an international team of experts discuss their latest ideas concepts methods and interpretations with supporting examples This volume is intended for advanced students and specialists in psychobiology neuroscience neuroendocrinology and psychiatry but might also be interest to anyone concerned with understanding the Neuroendocrine correlates of sleep wakefulness The contributions are directed more towards providing an integrated view of the field from the perspective of the authors rather than being a compendium of recent results The intent is to provide a reference book for recent and future workers in this and related areas of medicine and biology Each topic in this volume has

received the attention of a panel of authors who have responded to our request to review and place into perspective the major issues which will undoubtedly confront newcomers to the field. The topics dealt with in Neuroendocrine correlates of Sleep wakefulness are both diverse and complex. The editors hope that this volume will provide an authoritative summary of important issues in the neuroendocrine correlates of sleep wakefulness. We also hope that it will motivate new researchers to join the quest for solutions to the problems that have been identified by our contributing authors.

*Current Research on Sleep and Dreams* Gay Gaer Luce, 1965  
*Current Research on Sleep and Dreams* United States. Public Health Service, Gay Gaer Luce, 1966. This monograph was stimulated by the extraordinary growth now apparent in an area generally identified as sleep and dream research. For this recent concentration of scientific effort offers a singular example of the power that basic research can exert in penetrating the problems of mental health and illness. In the past year alone the National Institute of Mental Health supported over 60 projects related in whole or in part to studies of sleep and dreams with awards totaling over 2 million. The work of many of these NIMH investigators is included in this summary which extends beyond the Institute's program insofar as necessary to indicate the major trends of work in the area. The report cannot of course encompass the classical studies already summarized in published literature nor even provide a comprehensive survey of present-day sleep research for although much of the scientific data on sleep have been generated during the last dozen years significant references in this field now number in the many thousands. The mosaic of disciplines contributing to the study of sleep contains such diverse fields as psychiatry and mathematics, psychology and biochemistry, physiology and anthropology. Nevertheless, ferment about the subject matter and a spirit of cooperation across traditional disciplinary lines have made it possible to knit together data that might otherwise have lain unrelated in a variety of laboratories. During the past year individual summaries of many of the projects cited here were distributed to scientists working in the field of sleep and dreams. Many of the recipients felt that up-to-date reports especially in a field of such dynamic activity represented a unique solution to the problem of scientific information exchange. Such communication it was felt provided a quick look at work in progress that might prevent duplication of effort and stimulate pertinent contacts among scientists thus aiding them in their work. It is hoped that this monograph will be a further part of that process.
