Martin,2009-10-20 With nothing left to lose the Romulan Star Empire engages in all out war against humanity determined once and for all to stop the human menace from spreading across the galaxy At the start of the twenty first century unconditional war swept across the Earth A war that engulfed the great and the small the rich and the poor giving no quarter Each side strove for unconditional victory and as battle built upon battle the living began to envy the dead Chastised by the cataclysm that they had unleashed the governments of Earth came together Humanity vowed to put an end to war and to strive for the betterment of every living creature A united Earth created Starfleet an interstellar agency whose mission was to explore the cosmos to come in peace for all mankind It was a na ve wish that was battered by interstellar realities yet man persists in the belief that peace is the way Banding together with other powers to form a Coalition of Planets humanity hopes that the strength each can offer the other will allow for peaceful exploration However the rise of the Coalition strikes dread within the Romulan Star Empire They feel its growing reach will cut them off from what is rightfully theirs The Romulans know that the alliance is fragile that the correct strategy could turn allies into foes Perfecting a way of remotely controlling Coalition ships and using them as weapons against one another the Romulans hope to drive a wedge of suspicion and mistrust between these new allies One Starfleet captain uncovers this insidious plot Jonathan Archer of the Enterprise

Bildstein,2017-05-02 Raptors are formally classified into five families and include birds such as eagles ospreys kites true hawks buzzards harriers vultures and falcons that are familiar and recognized by many observers These diurnal birds of prey are found on every continent except Antarctica and can thrive in seemingly inhospitable spots such as deserts and the tundra They have powerful talons and hooked beaks for cutting and tearing meat and keen binocular vision to aid in their hunting prowess Because of their large

size distinctive feeding habits and long distance flight patterns raptors intrigue humans and have been the subject of much general interest as well as extensive scientific research Keith L Bildstein has watched and studied raptors on five continents and is well prepared to explain their critical importance not only as ecological entities but also as inspirational tokens across natural and human dominated landscapes His book offers a comprehensive and accessible account of raptors including their evolutionary history their relationships to other groups of birds their sensory abilities their general natural history their breeding ecology and feeding behavior and threats to their survival in a human dominated world Biologically sound but readable *Raptors* is a nontechnical overview of this captivating group It will allow naturalists birders hawk watchers science educators schoolchildren and the general public along with new students in the field of raptor biology to understand and appreciate these birds and in so doing better protect them
