the testing of the efficacy of medications the war on recreational drugs and the costs of pharmaceutical research and hot button topics that are constantly in the news such as evolution and creationism DNA testing stem cell research and genetically modified organisms Each entry provides a list of accessible resources useful for further research

One Moon, One Civilization. Why the Moon tells us we are alone in the Universe Jorge Laborda, 2010-12-08 Whether or not we are alone in the universe remains one of the most fascinating enigmas of science Accumulated scientific knowledge despite revealing that there are billions of galaxies and probably billions of billions of planets suggests that for practical purposes most likely we are alone This book examines this issue in a comprehensive way In particular among other issues it discusses why it is unlikely that life could be based on chemistry different from ours in the known universe It also reviews the extraordinary origin of the Moon which makes it very unlikely that other planets may possess moons similar to ours and it discusses why its presence orbiting Earth has been decisive for the emergence and evolution of intelligent beings that are here now reading these lines

The Science of Stephen King Lois H. Gresh, 2007-08-01 Advance Praise What a treasure house is this book Robots space aliens Einstein black holes time travel these themes and much more from Stephen King's amazing books are opened up like toy chests It's tremendous fun entirely educational and a great tribute to King Peter Straub A fun fun read F Paul Wilson The Science of

Stephen King appeals to both the scientist and the longtime reader of Stephen King in me Gresh and Weinberg use concepts from King's fiction as launching pads for in depth explorations of concepts as diverse as ESP pyrokinesis time travel artificial intelligence quantum chemistry alternate realities string theory and the possibility that we'll be visited by aliens or that we'll face a global pandemic Much of what Stephen King writes about in his novels is closer to reality than you might think Bev Vincent Ph.D. author of *The Road to the Dark Tower* A superb overview of King's use of scientific concepts in his stories And considering all the scary talk lately about pandemic flu their chapter on *The Stand* is timely as hell Stephen Spignesi author of *The Complete Stephen King Encyclopedia* Just as Sagan and Asimov popularized science to the masses by making it entertaining and informative so too do Gresh and Weinberg Compulsively readable and thought provoking George Beahm author of *The Stephen King Companion* [The Zoologist's Guide to the Galaxy](#) Arik Kershenbaum, 2020-09-24 DISCOVER HOW LIFE REALLY WORKS ON EARTH AND IN SPACE A wonderfully insightful sidelong look at Earthly biology Richard Dawkins Crawls with curious facts Sunday Times _____ We are unprepared for the greatest discovery of modern science Scientists are confident that there is alien life across the universe yet we have not moved beyond our perception of aliens as Hollywood stereotypes The time has come to abandon our fixation on alien monsters and place our expectations on solid scientific footing Using his own expert understanding of life on Earth and Darwin's theory of evolution which applies throughout the universe Cambridge zoologist Dr Arik Kershenbaum explains what alien life must be like This is the story of how life really works on Earth and in space _____ An entertaining eye opening and above all a hopeful view of what or who might be out there in the cosmos Philip Ball author of *Nature's Patterns* A fascinating insight into the deepest of questions what might an alien actually look like Lewis Dartnell author of *Origins* If you don't want to be surprised by extraterrestrial life look no further than this lively overview of the laws of evolution that have produced life on earth Frans de Waal author of *Mama's Last Hug* **Space, Time, and Aliens** Steven J. Dick, 2020-05-11 In this comprehensive and interdisciplinary volume former NASA Chief Historian Steven Dick reflects on the exploration of space astrobiology and its implications cosmic evolution astronomical institutions discovering and classifying the cosmos and the philosophy of astronomy The unifying theme of the book is the connection between cosmos and culture or what Carl Sagan many years ago called the cosmic connection As both an astronomer and historian of science Dr Dick has been both a witness to and a participant in many of the astronomical events of the last half century This collection of papers presents his reflections over the last forty years in a way accessible to historians philosophers and scientists alike From the search for alien life to ongoing space exploration efforts readers will find this volume full of engaging topics relevant to science society and our collective future on planet Earth and beyond [Weird Weather](#) David A. J. Seargent, 2012-03-02 This book is in a sense a sequel to David Seargent's first Springer book *Weird Astronomy* 2010 Whereas *Weird Astronomy* extended over a broad range of purely astronomical topics the present work concentrates on phenomena closer to home the atmospheric and

shallow space events as opposed to deep space events The line between astronomy and meteorology is blurred a fact that is discussed in *Weird Weather* It is not primarily a book of wonders or of the unexplained although some of the topics covered remain mysteries It is primarily directed toward those who are fascinated by climate and weather and who are open minded when considering Earth s climate what drives it and what are the causes of climate change The author David A J Seargent presents the facts with a balanced and scientific approach *Weird Weather Tales of Astronomical and Atmospheric Anomalies* is about strange unusual and apparently inexplicable observations of the air and sky Primarily these are in the Earth s atmosphere but there are corresponding phenomena in the atmospheres of other planets of the Solar System lightning on Venus Jupiter and Saturn whirlwinds and dust storms of Mars and auroras on Jupiter Topics include anomalous lights anomalous sounds spectacular effects of cloud illumination by the Sun or Moon lightning phenomena electrophonic sounds of lightning aurora and meteors tornado and whirlwind phenomena on Earth and Mars usual atmospheric effects mirages and the possible astronomical influences on cloud and climate *Our Common Cosmos* Zoë Lehmann Imfeld, Andreas Losch, 2018-12-27 This volume collects an international body of voices as a timely response to a rapidly advancing field of the natural sciences The contributors explore how the disciplines of theology earth and space sciences contribute to the debate on constantly expanding ethical challenges and the prospect of humanity s future The discussions offered in this volume see the community as central to a sustainable and ethical approach to earth and space sciences examining the role of theology in this communal approach but also recognizing theology itself as part of a community of humanity disciplines Examining the necessity for interaction between disciplines this collection draws on voices from biodiversity studies geology aesthetics literature astrophysics and others to illustrate precisely why a constructive and sustainable dialogue is needed within the current scientific climate *Societal Impact of Spaceflight* Steven J. Dick, Roger D. Launius, 2007 Since the dawn of spaceflight advocates of a robust space effort have argued that human activity beyond Earth makes a significant difference in everyday life Assertions abound about the impact of spaceflight on society and its relationship to the larger contours of human existence Fifty years after the Space Age began it is time to examine the effects of spaceflight on society in a historically rigorous way Has the Space Age indeed had a significant effect on society If so what are those influences What do we mean by an impact on society And what parts of society Conversely has society had any effect on spaceflight What would be different had there been no Space Age The purpose of this volume is to examine these and related questions through scholarly research making use especially of the tools of the historian and the broader social sciences and humanities Herein a stellar array of scholars does just that and arrives at sometimes surprising conclusions **Sacred Science** William H. West, 2025-04-08 If you review of the impulses that created the universe directed the unfolding of life and empowered human consciousness you reach an undeniable conclusion an omnipotent Creator supervised the unfolding of our universe From the moment of creation to the emergence of a planet tailor made for life from the journey of multi million species to the

development of an upright creature hungry for God science tells a sacred story a superintelligent Creator used His mathematical genius to convert lifeless equations into galaxies planets and people His love has been visible throughout the process Could our journey reflect thousands of random accidents with no divine guidance Creation delivered impulses that filled the universe with galaxies and stars Eliminate any one of those blueprints and the universe would have been stillborn Stars produced a perfect mix of elements to bring the universe to life Without a robust ensemble of gene and protein sequences life might still be living at the bottom of the sea Hundreds of human genes convert the neurons of a human infant into trillions of networks in an adult brain Without those God given genes a dangerous world may have left us trapped in the treetops with no interest in science at all But God shared His mind and triggered the emergence of human consciousness Where do we find ourselves after centuries of that scientific searching We see that science reflects its source Science is a gift of God's creative love and is nothing less than sacred

Lissauer, Imke de Pater, 2013-09-09 A quantitative introduction to the Solar System and planetary systems science for advanced undergraduate students this engaging new textbook explains the wide variety of physical chemical and geological processes that govern the motions and properties of planets The authors provide an overview of our current knowledge and discuss some of the unanswered questions at the forefront of research in planetary science and astrobiology today They combine knowledge of the Solar System and the properties of extrasolar planets with astrophysical observations of ongoing star and planet formation offering a comprehensive model for understanding the origin of planetary systems The book concludes with an introduction to the fundamental properties of living organisms and the relationship that life has to its host planet With more than 200 exercises to help students learn how to apply the concepts covered this textbook is ideal for a one semester or two quarter course for undergraduate students

The World Perceived A. J. MACDONALD JR, 2009-08-05 How are we to make sense of the Bible in the context of the modern world In this book you will discover a new way of perceiving the world a way in which the biblical view of the world can be seen as just as true for us as the modern scientific view of the world The World Perceived explores how we think about the world how we perceive the world and how we choose to live our lives in the world Using phenomenology as a philosophical framework for the construction of a biblical theology of appearances the author illustrates how the biblical description of reality is of far greater relevance to us than are the descriptions of reality given to us by modern science and popular science writers By exploring the epistemological bases of both science and theology as a forms of knowledge along with the assumptions implicit within both worldviews The World Perceived invites the reader upon an intellectual journey into the world of phenomenal reality The author makes a strong case for the validity of the biblical description of the world and reality by demonstrating how the modern scientific description of the world and reality are in no way superior to the biblical description Using three examples of conflicting scientific and biblical descriptions of the world i.e. the geocentric versus the heliocentric conception of the universe creation versus evolution and absolute time versus relative

time *The World Perceived* demonstrates the Bible's relevancy to the modern world which is often hostile to both religion and the Bible like no other book on the market today
