The Evolution of Political Knowledge American Political Science Association. Meeting, Edward D. Mansfield, Richard Sisson, 2004 Over the course of the last century political scientists have been moved by two principal purposes First they have sought to understand and explain political phenomena in a way that is both theoretically and empirically grounded Second they have analyzed matters of enduring public interest whether in terms of public policy and political action fidelity between principle and practice in the organization and conduct of government or the conditions of freedom whether of citizens or of states Many of the central advances made in the field have been prompted by a desire to improve both the quality and our understanding of political life Nowhere is this tendency more apparent than in research on American politics a field in which concerns for the public interest have stimulated various important insights This volume systematically analyzes the major developments within the broad field of American politics over the past three decades Each chapter is composed of a core paper that addresses the major puzzles conversations and debates that have attended major areas of concern and inquiry within the discipline These papers examine and evaluate the intellectual evolution and natural history of major areas of political inquiry and chart particularly promising trajectories puzzles and concerns for future work Each core paper is accompanied by a set of shorter commentaries that engage the issues it takes up thus contributing to an ongoing and lively dialogue among key figures in the field

Ideas about Agriculture in the Political Economy of Japan James M. Brady, 2021-02-01 A major paradox in the political economy of Japan is why an enduring majority of citizens as voters consumers and taxpayers has explicitly supported or implicitly consented to a policy regime of agricultural protection that reduces material welfare and limits consumer choice This book goes beyond standard political economy approaches that focus on self interest pursuit by policy actors to contend that ideational factors are an important explanatory variable shaping the policy preferences of individuals towards agriculture and agricultural policy in Japan The book traces the historical origins of ideas about agriculture particularly those associated with the n honshugi tradition and offers an original taxonomy classifying the development of agrarian thought from the Tokugawa era until the 1930s It then analyses postwar media portrayals of agriculture in public policy debates around the 1961 and 1999 agricultural basic laws charting the evolution of both economic and non economic ideas in those periods Finally it investigates the predominant ideas held about agriculture by individuals today as evidenced through public opinion survey data and demonstrates that concerns about health and food safety food self sufficiency and the environment strongly outweigh economic welfare considerations The study concludes by examining developments in agricultural policy under the Abe administration in the context of these predominant ideas and considers how those ideas could be operationalised in agricultural policy responses to major crises including the coronavirus pandemic and climate change
