Revisiting Mathematics Education China Lectures:

Revisiting Mathematics Education Hans Freudenthal, 2005-12-08 This book is a product of love and respect. If that sounds rather odd, I initially apologise but let me explain why I use those words. The original manuscript was of course Freudenthal's, but his colleagues have carried the project through to its conclusion with love for the man and his ideas and with a respect developed over years of communal effort. Their invitation to me to write this Preface enables me to pay my respects to the great man, although I am probably incurring his wrath for writing a Preface for his book without his permission. I just hope he understands the feelings of all colleagues engaged in this particular project. Hans Freudenthal died on October 13th 1990 when this book project was well in hand. In fact, he wrote to me in April 1988 saying I am thinking about a new book. I have got the sub title China Lectures though I still lack a title. I was astonished. He had retired in 1975 but of course he kept working. Then in 1985 we had been helping him celebrate his 80th birthday and although I said in an Editorial Statement in *Educational Studies in Mathematics* (ESM) at the time we look forward to him enjoying many more years of non retirement, I did not expect to see another lengthy manuscript. , The Legacy of Hans Freudenthal Leen Streefland, 2013-03-09 The Legacy of Freudenthal pays homage to Freudenthal and his work on mathematics, its history and education. Almost all authors were his scholars or co-workers. They testify to what they learned from him. Freudenthal himself contributes posthumously. His didactical phenomenology of the concept of force is both provocative and revealing in its originality compared with what is usually found in physics instruction. Freudenthal is portrayed as a universal human being by Josette Adda. He made considerable contributions to mathematics itself, e.g. on homotopy theory and Lie groups in geometry. The exposition of Freudenthal's mathematical life and work is on Van Est's account. Henk Bos discusses his historical work. The essay review of the 8th edition of Hilbert's *Grundlagen der Geometrie* serves as a vehicle of thought. The main part of the book however concerns Freudenthal's work on mathematics education. Christine Keitel reviews his final book *Revisiting Mathematics Education* 1991. Fred Goffree describes Freudenthal's *Working on Mathematics Education* both from an historical as well as a theoretical perspective. Adrian Treffers analyses Freudenthal's influence on the development of realistic mathematics education at primary level in the Netherlands, especially his influence on the Wiskobas project of the former IOWO. Freudenthal once predicted the disappearance of mathematics as an individual subject in education sometime around the year 2000 because it would by then have merged with integrated thematic contexts. Jan de Lange anticipates this future development and shows that Freudenthal's prediction will not come true after all. Reflective interludes unveil how he might have influenced those developments. Freudenthal contributed a wealth of ideas and conceptual tools to the development of mathematics education on contexts, didactical phenomenology, guided reinvention, mathematisation, the constitution of mental objects, the development of reflective thinking levels in learning processes, the development of a mathematical attitude and so on, but he did not design very much concrete material. Leen Streefland deals with the question

of design from a theoretical point of view while applying Freudenthal's ideas on changing perspective and shifting For teachers researchers mathematics educators mathematicians educationalists psychologists and policy makers
