A Study of the Scattering of Electromagnetic Waves from Certain Types of Random Media (microfilm).
 Roderic Lloyd Olsen,1970 **The Scattering of Light and Other Electromagnetic Radiation** Milton Kerker,2013-10-22
 The Scattering of Light and Other Electromagnetic Radiation discusses the theory of electromagnetic scattering and describes some practical applications The book reviews electromagnetic waves optics the interrelationships of main physical quantities and the physical concepts of optics including Maxwell s equations polarization geometrical optics interference and diffraction The text explains the Rayleigh² theory of scattering by small dielectric spheres the Bessel functions and the Legendre functions The author also explains how the scattering functions for a homogenous sphere change depending on different physical parameters such as the optical size the complex refractive index and the angle of observation The author addresses the assignment of a complex dielectric constant and a corresponding refractive index to plasma when an alternating electrical field is applied that will make the plasma exhibit conductivity and polarization In a liquid the author points out that the intensity of scattering is one or two orders of magnitude less than that found in a gaseous system he explains that the molecules are no longer acting as incoherent nor as randomly located scatterers This book can be useful for physicists chemists biochemists and engineers whose work includes research utilizing light scattering in the study of certain gases pure liquids molecular solutions macromolecules polymers and glass

Tong, Thomas B. A. Senior, 1972 Numerical procedures are developed for the digital solution of the integral equations for the current induced on a perfectly conducting two dimensional periodic surface of arbitrary profile when a plane electromagnetic wave is incident By using Floquet's theorem the range of integration is reduced to a single period and special summation techniques consisting of a Poisson summation and the subtraction of the dc term are used to improve the convergence of the infinite series representation of the Green's function The integral equations are then solved numerically using the moment method and an interpolation scheme Data are obtained for both the surface and far fields for a variety of sinusoidal full wave rectified inverted full wave rectified and triangular profiles for plane waves of either polarization at oblique as well as normal incidence and the results are compared with the predictions of physical optics **Wave Scattering in Complex Media:**
