Research on Physics Education Edward F. Redish,Matilde Vicentini,Società italiana di fisica,2004

Physics Education research is a young field with a strong tradition in many countries However it has only recently received full recognition of its specificity and relevance for the growth and improvement of the culture of Physics in contemporary Society for different levels and populations This may be due on one side to the fact that teaching therefore education is part of the job of university researchers and it has often been implicitly assumed that the competences required for good research activity also guarantee good teaching practice On the other side and perhaps more important is the fact that the problems to be afforded in doing research in education are complex problems that require a knowledge base not restricted to the disciplinary physics knowledge but enlarged to include cognitive science communication science history and philosophy The topics discussed here look at some of the facets of the problem by considering the interplay of the development of cognitive models for learning Physics with some reflections on the Physics contents for contemporary and future society with the analysis of teaching strategies and the role of experiments the issue of assessment

Impacts of Landscape Change on

Water Resources Manoj K. Jha,2020-11-13 Changes in land use and land cover can have many drivers including population growth urbanization agriculture demand for food evolution of socio economic structure policy regulations and climate variability The impacts of these changes on water resources range from changes in water availability due to changes in losses of water to evapotranspiration and recharge to degradation of water quality increased erosion salinity chemical loadings and pathogens The impacts are manifested through complex hydro bio geo climate characteristics which underscore the need for

integrated scientific approaches to understand the impacts of landscape change on water resources Several techniques such as field studies long term monitoring remote sensing technologies and advanced modeling studies have contributed to better understanding the modes and mechanisms by which landscape changes impact water resources Such research studies can help unlock the complex interconnected influences of landscape on water resources in terms of quantity and quality at multiple spatial and temporal scales In this Special Issue we published a set of eight peer reviewed articles elaborating on some of the specific topics of landscape changes and associated impacts on water resources Proceedings of the 15th International Marine Design Conference Austin A.
