Schedule Effects Drugs Drinking And Aggression:

Schedule Effects R. M. Gilbert, J. D. Keehn, 1972-12-15 In Toronto in 1970 the Addiction Research Foundation held a symposium on schedule induced and schedule dependent phenomena The Foundation's main concerns with drug behaviour environment interactions but because it is difficult to consider these interactions in isolation from general behavioural phenomena the symposium was arranged around topics that are not specific to drug effects This book contains those contributions to the symposium that focused on phenomena associated with schedules of reinforcement Most of the papers have been extensively revised for the purpose of this publication Three kinds of schedule effect are examined in the book Schedule dependent phenomena arise when the effect on behaviour of an operation such as the administration of a drug depends on the schedule of reinforcement maintaining the behaviour Two aspects of these phenomena are treated in detail by J W McKearney who emphasizes drug effects and by D E Blackman who concentrates on the intrusion of stimuli that signal electric shock A second kind of schedule effect is discussed by T Thompson and R Pickens who show that reinforcing drugs are subject to scheduling variables in common with other reinforcements The remaining chapters focus on schedule induced phenomena although other schedule effects are also considered Behaviour is schedule induced when it occurs as the result of the application of a reinforcement schedule to other behaviour without being specified in that schedule J D Keehn discusses these phenomena in the context of behaviour that cannot be accounted for in terms of the simple reinforcement model T D Hawkins and his collaborators report a series of hitherto unpublished experiments including work on alcohol intoxication as a schedule induced phenomenon J L Falk reviews the studies of schedule induced behaviour which he labels adjunctive and provides an account that recognizes ethological analyses of related phenomena a feature too of the chapter by W Wuttke and N K Innis The two final chapters are concerned with aggression induced by scheduling and other factors R R Hutchinson and G Emley examine the temporal relationships of the different kinds of behaviour that can occur when electric shock is delivered at frequent intervals and describes the effects of various drugs on these relationships R Ulrich and his colleagues provide a comprehensive review of shock induced aggression and its controlling variables The book will be of interest to advanced students and professionals in psychology pharmacology and related disciplines *Drinking Behavior* J. Weijnen, 2012-12-06 This is the first book that is devoted entirely to a discussion of the effects on drinking behavior of sensory stimulation of the tongue and mouth As Blass and Hall J 1976 have recently pointed out there has been an overrejection of the emphasis by Cannon 1932 and Hull 1943 on the peripheral origins e g dry mouth empty stomach of the control of ingestive behavior Thus most present day investigators of drinking behavior have been concentrating on central mechanisms of control to the neglect of the periphery In this volume we have attempted to bring together much of the pertinent peripheral literature through originally written chapters that are concerned with the role of orosensory factors in the mediation of drinking and licking Postingestive effects of fluids receive little attention Indeed two chapters deal with

consummatory licking in the absence of intake of fluids A good understanding of the consequences of orosensory stimulation on licking and drinking behavior requires insight into the functional anatomy of the tongue and mouth the characteristics of the licking response and the problem of recording of licking behavior Several chapters deal with these subjects It has not only been a pleasure but also a privilege to edit this volume We have learned much from the expert treatment of the different aspects of licking and drinking behavior by the chapters authors

Handbook of Operant Behavior Werner K. Honig, J. E. R. Staddon, 2022-02-21 This classic edition of the Handbook of Operant Behavior presents seminal work in the field of learning and behavior foreshadowing a new direction for learning research and presenting many questions that remain unanswered Featuring impressive contributions from leading figures across the field ranging from N J Mackintosh from what was to become the cognitive school through Morse Kelleher Hutchinson and Hineline on the neglected topic of aversive control to Blough and Blough on psychophysics to Philip Teitelbaum on behavioral physiology the book is a must read for anyone interested in human and animal learning In a newly written introduction J E R Staddon highlights several issues that deserve more attention how language is learned and syntax evolves how animals choose and a new paradigm for the study of learning in general The book is essential reading for all students and researchers of learning and behavior and aims to encourage researchers to revisit some of the fascinating behavioral questions raised by the original book

Drugs of Abuse Leslie Iversen, 2013-11-11 Underlying the design of the Handbook of Psychopharmacology is a prejudice that the study of drug influences on the mind has advanced to a stage where basic research and clinical application truly mesh These later volumes of the Handbook are structured according to this conception In certain volumes groups of drugs are treated as classes with chapters ranging from basic chemistry to clinical application Other volumes are assembled around topic areas such as anxiety or affective disorders Thus besides chapters on individual drug classes we have included essays addressing broad areas such as The Limbic Hypothalamic Pituitary Adrenal System and Human Behavior and Peptides and the Central Nervous System Surveying these diverse contributions one comes away with a sentiment that far from being an applied science borrowing from fundamental brain chemistry and physiology psychopharmacology has instead provided basic researchers with the tools and conceptual approaches which now are advancing neurobiology to a central role in modern biology Especially gratifying is the sense that while contributing to an understanding of how the brain functions psychopharmacology is a discipline whose fruits offer genuine help to the mentally ill with promises of escalating benefits in the future

Thirst David J. Ramsay, David Booth, 2012-12-06 At one time or another everyone has said I am thirsty Yet what causes this sensation of thirst It is obvious that a certain quantity of fluid must be present for the body to function normally How does a water deficit in the body then

influence drinking habits But supposing the physiological need is met what about the psychological need or social need Water is certainly the most necessary fluid then why do we humans often prefer other beverages even at great cost of effort or money or health The subject of thirst and drinking behavior are uniquely discussed in this book For the first time both the physiological and the psychological aspects of water and beverage consumption are examined in one volume The many recent developments concerning how a lack of water is signalled physiologically and processed neurally to affect drinking behavior are critically surveyed Prospects for understanding the cultural and sensory influences on beverage consumption are mapped out The thirty one chapters by authorities in the field were all mutually reviewed and revised in the light of precirculated comments and round table discussions Together they provide a complete picture of the current state of knowledge on what determines fluid consumption in human beings and animals *Reinforcement* R. M. Gilbert,J. R. Millenson,2014-05-10 *Reinforcement Behavioral Analyses* covers the proceedings of the 1970 Symposium on Schedule induced and Schedule Dependent Phenomena held in Toronto Ontario Canada This symposium highlights theoretically inclined papers on reinforcement processes This text contains 10 chapters and begins with a description of how behavior is induced by various environmental events especially reinforcing events as well as the relationship between control by inducing stimuli and reinforceability The subsequent chapters deal with reinforcement phenomena in terms of preference relations and the conditioned emotional responses in terms of opposing motivational processes These topics are followed by reviews of schedule dependent effects of preaversive stimuli and the maintenance of behavior by apparent reinforcers that might be expected to punish as well as the identification of critical variable that underlie the phenomenon Other chapters examine the interactions between operant and responded conditioning processes The final chapters outline the experiments on behavior stream whose hallmark is reinforcement if the absence of specified behavior These chapters emphasize the analogy between the evolution of species and the modification of behavior This book will be of value to behaviorists and psychologists **Drug Addiction II** ,2013-11-27 *Advances in Behavioral Pharmacology* Travis Thompson,Peter B. Dews,William A. McKim,2013-10-22 *Advances in Behavioral Pharmacology Volume 3* covers papers dealing with various aspects of the ways in which drug effects are related to and perhaps modified by the rate of responding The book discusses the behavioral actions of benzodiazepines and considers the extent to which these actions are consistent with the proposition that these effects are partially or entirely determined by control rates of responding The text then describes rate dependence and the effects of phenothiazine antipsychotics in pigeons the rate convergent effects of drugs and the rate dependent effects of extra stimuli of drugs and drug state change Historical mathematical and alternative considerations in quantitation in behavioral pharmacology as well as the history and status of rate dependency investigations are also considered The book then tackles the scope and limitations in the explanation and analysis of the behavioral effects of drugs drug effects on behaviors maintained by different events and the importance of identifying which of these factors contributes to the behavior
