**Project Planning, Scheduling, and Control in Construction** Calin M. Popescu, Chotchai Charoenngam, 1995-03-20  
Critical Path Method CPM and Performance Evaluation and Review Technique PERT are widely recognized as the most effective methods of keeping large complex construction projects on schedule under budget and up to professional standards. But these methods remain underused because they are poorly understood and due to a host of unfamiliar terms and applications may seem more complicated than they really are. This encyclopedia brings together in one comprehensive volume all terms, definitions, and applications related to the time and cost management of construction projects. While many of these terms refer to ancient and venerable building practices, others have evolved quite recently and refer specifically to modern construction and management techniques. Sources include hundreds of professional books, trade journals, and research publications as well as planning and scheduling software vendor literature. The detailed glossary of all applicable terms includes across-referenced listing of examples that describe real-world applications for each term supplied. An extensive bibliography covers all applicable books, articles, and periodicals available on project planning, scheduling, and control using CPM and related subjects. This book is an important quick reference and desktop information resource for construction planners, schedulers, and controllers as well as civil engineers and project managers. It is also the ultimate research tool for educators, students, or anyone who seeks to improve their understanding of the management of modern construction projects.

**Construction Project Scheduling and Control** Saleh A. Mubarak, 2015-04-13  
Written by a career construction professional, this text about scheduling and project control addresses the average student, detailing all the steps clearly and without shortcuts. And now for the first time, the book is part of a learning package that comes with access to an online course built around the book, provided by online training leader Red Vector. Solved and unsolved exercises cover all subjects, and computer software programs for construction are included for each chapter. The book, and by extension the class, presents precedence networks as the realistic solution to scheduling, the main part of project control, and introduces new concepts in CPM scheduling such as the author's own Dynamic Minimum Lag technique. The new edition includes coverage of building information modeling (BIM), lean construction, sustainability, and other cutting-edge construction topics.
