Smith, 2013-09-09 Modern and Global Ayurveda provides an overview of the relatively recent history of Ayurveda in its modern and globalized forms One of the traditional medical systems originating on the Indian subcontinent Ayurveda is fast becoming a transnational phenomenon Contributors to this volume include both scholars and practitioners of Ayurveda The wide range of perspectives they offer include the philosophical anthropological sociopolitical economic biomedical and pharmacological Issues such as the ideological clashes between classical and modernized Ayurveda the export of Ayurvedic medical lore to Western countries and the possible reimport of its adapted and reinterpreted contents are covered and prove particularly relevant to contemporary discussion on the integration of complementary and alternative MMR and Autism Michael Fitzpatrick, 2004-08-02 The MMR controversy has been characterized by two one health care sided discourses In the medical world the weight of opinion is overwhelmingly in favour of MMR In the public world the anti MMR campaign has a much greater influence centred on the fears of parents that the triple vaccine may cause autism in their children Both professionals and parents struggle to cope with the anxieties this creates but find it difficult to find a balanced account of the issues In MMR and Autism Michael Fitzpatrick a general practitioner who is also the parent of an autistic child explains why he believes the anti MMR campaign is misguided in a way that will reassure parents considering vaccination and also relieve the anxieties of parents of autistic children At the same time this informative book provides health care professionals and health studies students with an accessible overview of a contemporary health issue with significant policy implications Autism's False Prophets Paul A. Offit, 2010-04-02 With a new preface by the author Cover

helps bring about This book gives students researchers and the general reader interested in the place of science in contemporary society a compelling framework for future thinking and discussion BLIND SPOTS Henrik Isager MD, PhD,2014-03-14 In spite of increasing use of advanced technology the patient orientated field of medical science clinical medicine has by and large retained the mechanistic substantial perception of reality inherited from the scientific communities of the eighteenth and nineteenth centuries In contrast physics bade farewell to this view more than a century ago and now conceives the world primarily as a dynamic continuum of energy Biochemists now regard structural substantially orientated and dynamic energetically orientated aspects of biochemistry as complementary and equally important As seen from the perspective of the history of ideas the anachronistic world view of clinical medicine a view that can be characterised as dogmatic substantialism places it in an outdated position compared with physics and biochemistry a position from which the existence of biologically relevant energetic phenomena cannot be recognised as such simply because they are not supposed to exist During the latest three decades the epidemic of energy loss which comprises the diagnostic entities ME CFS fibromyalgia multiple chemical sensitivity consequences of whiplash injury and several other conditions has affected Western societies increasingly and caused significant humanitarian social and economical problems It is no exaggeration to state that the confrontation between conventional clinical medicine and the epidemic of energy loss has created confusion and all too often absurdities Isager attempts a thorough analysis of this situation and its historical and ideological roots emphasising epistemological problems problems concerned with how we know and how or why we do not know
