Secondary Metabolism J. Mann, 1978 This book is concerned with the biosynthesis biological activity and ecological significance of secondary metabolites natural products These include alcaloids such as morphine steroids like cholesterol and antibiotics like the penicillins The author considers each of the major classes of secondary metabolites according to the basic building blocks from which they are derived and highlights the pharmacological and toxicological properties of compounds found in insects plants and microorganisms The final chapter explores the possible ecological significance of these products The second edition incorporates new material on the isolation and characterization of the enzymes of secondary metabolism and on the new NMR techniques which have revolutionized the elucidation of biosynthetic pathways The book is important reading for advanced undergraduates and graduates in chemistry biochemistry and botany as well as researchers in the pharmaceutical industry

Secondary Metabolism in Microorganisms, Plants and Animals M. Luckner, 2013-12-11 Many of the reactions and compounds involved in metabolism are almost identical in the different groups of living organisms They are known as primary metabolic reactions and primary metabolic products In addition however a wide variety of biochemical pathways are characteristic of only a few species of organisms of single chemical races or even of a certain stage of differentiation of special ized cells Such pathways are collectively referred to as secondary metabolism and the compounds formed are called secondary products Secondary products are frequently revealed by their color smell or taste They are responsible for the flavor of most foodstuffs and beverages and for the color and fragrance of flowers and fruits Many of them are part of the materia medica e g alkaloids cardiac glycosides antibiotics or compounds acting as hormones Others are used by industry e g rubber tannins and cellulose

This book treats the organization and significance of biosynthesis storage transformation and degradation of the most important groups of secondary products in microorganisms plants and animals It shows that the formation of secondary products is a common characteristic of specialized cells brought about by the action of special enzymes encoded by specific genetic material It demonstrates that the biosynthesis of secondary products is typically without significance for the individual producer cell but may play a decisive role in the development and function of the producer organism as a whole

Raja, 2018-09-05 This book consists of an introductory overview of secondary metabolites which are classified into four main sections microbial secondary metabolites plant secondary metabolites secondary metabolites through tissue culture technique and regulation of secondary metabolite production This book provides a comprehensive account on the secondary metabolites of microorganisms plants and the production of secondary metabolites through biotechnological approach like the plant tissue culture method The regulatory mechanisms of secondary metabolite production in plants and the pharmaceutical and other applications of various secondary metabolites are also highlighted This book is considered as necessary reading for microbiologists biotechnologists biochemists pharmacologists and botanists who are doing research in secondary metabolites It should also be useful to MSc students MPhil and PhD scholars scientists and faculty members of various science disciplines

Secondary Metabolism and Cell Differentiation M. Luckner, L. Nover, H. Böhm, 2013-06-29 1 Secondary Metabolism and Differentiation In addition to the primary metabolic reactions which are similar in all living beings formation and breakdown of nucleic acids and proteins as well as of their precursors of most carbohydrates of some carboxylic acids etc a vast number of metabolic pathways lead to the formation of compounds peculiar to a few species or even to a single chemical race only These reactions in accord with CZAPEK 1921 and PAECH 1950 are summed up under the term secondary metabolism and their products are called secondary metabolites The wide variety of secondary products formed in nature includes such well known groups as alkaloids antibiotics cardiac glycosides tannins saponins volatile oils and others A considerable number of them are of economic importance in therapeutics or technology Although secondary products are produced by microorganisms higher plants and animals cf LUCKNER 1972 most of the substances are found in the plant kingdom The lack of mechanisms for true excretion in higher plants may result in this unequal distribution the waste products of metabolism in plants instead being accumulated in the vacuoles the cell walls or in special excretory cells or spaces of the organism metabolic excretion cf FREY WYSSLING 1935 1970 MOTHES 1966a b 1972 LUCKNER et al 1976 Many secondary substances have however a direct biologic function They can be regulatory effectors e g

The Biosynthesis of Secondary Metabolites R. B. Herbert, 2012-12-06 This is a book about experiments and results of experiments The results described are the fruit of thirty years labour in the field of secondary metabolism Secondary metabolism more than any other part of the chemistry of life has been the special preserve of organic chemists Investigation of secondary metabolism began with curiosity about the struc

tures of compounds isolated from natural sources i.e secondary metabolites Coeval with structure determination there has been a curiosity about the origins and mechanism of formation of secondary metabolites or natural products as they have been called It is the experimental outcome of this curiosity that is described here This account is primarily intended to be an introduction to the biosynthesis of secondary metabolites I have also endeavoured however to make the book as comprehensive as possible This has meant that some of the material has had to be presented in abbreviated form The abbreviated material is largely confined to particular sections of the book The paragraphs marked with a dagger † can be omitted by the reader wishing to acquire a general introduction to the subject A blend of the most significant and the most recent references is cited to provide the reader with ready access to the primary literature This is clearly most necessary for the material presented in abbreviated form Relevant reviews are also cited

Biochemistry of Plant Secondary Metabolism Michael Wink, 1999-09-21 The secondary metabolites of plants were once considered to be waste products today their true value is understood New methods of separation and

structural elucidation and advances in the investigation of biochemical activities have increased our understanding of secondary metabolites. Their function as a defense mechanism offers a great potential for technological gain. Secondary metabolites can be utilized in agriculture to breed stronger crops and in the manufacture of biorational pesticides. They can also be exploited by medicine as therapeutic agents. And these are just two of the likely uses. This landmark volume presents articles by an impressive team of experts from leading laboratories. Each chapter considers a current understanding of secondary metabolites in nature and the potential exploitation of those qualities by the biotechnology industry.

Primary and Secondary Metabolism of Plant Cell Cultures II Wolfgang G.W. Kurz, 2012-12-06

At the end of the initial meeting on Primary and Secondary Metabolism of Plant Cell Cultures at Schloss Rauischholzhausen it was decided to convene similar events on a regular basis midway between the International Congress for Plant Tissue and Cell Culture. We felt it was necessary to bring representatives of the research teams working in this field together to assess progress as well as to discuss future directions. The Plant Biotechnology Institute of the National Research Council of Canada in Saskatoon Saskatchewan was chosen to be the site for the second symposium held in 1988. The theme of this meeting was The Regulation of Primary and Secondary Metabolism in Plant Cells and judging by the contributions published in this volume it was a timely and actual one indeed. I would like to thank my organizing committee and my research group for their efforts, the National Research Council of Canada for the financial assistance and the participants for their contributions which all contributed to make this symposium a success. A special thank you to Mrs L Blashill and R Gallays for their assistance in hosting this event. Last but not least I would like to thank our publisher Springer Verlag Heidelberg for their decision to publish the proceedings of this and future symposia.
