## **Several Complex Variables In China:**

**Several Complex Variables in China** Chung-Chun Yang, Sheng Gong, 1993 Today there is increasing interest in complex geometry geometric function theory and integral representation theory of several complex variables The present collection of survey and research articles comprises a current overview of research in several complex variables in China Among the topics covered are singular integrals function spaces differential operators and factorization of meromorphic functions in several complex variables via analytic or geometric methods Some results are reported in English for the first time

**Geometric Function Theory In Several Complex Variables, Proceedings Of A Satellite Conference To The Int'l Congress Of Mathematicians In Beijing 2002** Sheng Gong, Carl H Fitzgerald, 2004-09-23 The papers contained in this book address problems in one and several complex variables The main theme is the extension of geometric function theory methods and theorems to several complex variables The papers present various results on the growth of mappings in various classes as well as observations about the boundary behavior of mappings via developing and using some semi group methods

**Complex Analysis and Its Applications** C.C. Yang, Guo-Chun Wen, K Y Li, Y M Chiang, 1994-04-05 This volume presents a collection of contributions to an international conference on complex analysis and its applications held at the newly founded Hong Kong University of Science and Technology in January 1993 The aim of the conference was to advance the theoretical aspects of complex analysis and to explore the application of its techniques to physical and engineering problems Three main areas were emphasised Value distribution theory Complex dynamical system and geometric function theory and the Application of complex analysis to differential equations and physical engineering problems

**Geometric Function Theory in Several Complex Variables** Carl H. FitzGerald, Sheng Gong, 2004 The papers contained in this book address problems in one and several complex variables The main theme is the extension of geometric function theory methods and theorems to several complex variables The papers present various results on the growth of mappings in various classes as well as observations about the boundary behavior of mappings via developing and using some semi group methods

**Contemporary Geometry** Hung-Hsi Wu, 2013-06-29 Early one morning in April of 1987 the Chinese mathematician J Q Zhong died unexpectedly of a heart attack in New York He was then near the end of a one year visit in the United States When news of his death reached his Chinese American friends it was immediately decided by one and all that something should be done to preserve his memory The present volume is an outgrowth of this sentiment His friends in China have also established a Zhong Jia Qing Memorial Fund which has since twice awarded the Zhong Jia Qing prizes for Chinese mathematics graduate students It is hoped that at least part of the reasons for the esteem and affection in which he was held by all who knew him would come through in the succeeding pages of this volume The three survey chapters by Li and Treibergs Lu and Siu Chapters 1 3 all center around the areas of mathematics in which Zhong made noteworthy contributions In addition to putting Zhong's mathematical contributions in perspective these articles should be useful also to

a large segment of the mathematical community together they give a coherent picture of a sizable portion of contemporary geometry The survey of Lu differs from the other two in that it gives a firsthand account of the work done in the People's Republic of China in several complex variables in the last four decades

### **Several Complex Variables**

KOHN, LU, REMMERT, SIU, 2012-12-06 In recent years there has been increasing interaction among various branches of mathematics This is especially evident in the theory of several complex variables where fruitful interplays of the methods of algebraic geometry differential geometry and partial differential equations have led to unexpected insights and new directions of research In China there has been a long tradition of study in complex analysis differential geometry and differential equations as interrelated subjects due to the influence of Professors S S Chern and L K Hua After a long period of isolation in recent years there is a resurgence of scientific activity and a resumption of scientific exchange with other countries The Hangzhou conference is the first international conference in several complex variables held in China It offered a good opportunity for mathematicians from China U S Germany Japan Canada and France to meet and to discuss their work The papers presented in the conference encompass all major aspects of several complex variables in particular in such areas as complex differential geometry integral representation boundary behavior of holomorphic functions invariant metrics holomorphic vector bundles and pseudoconvexity Most of the participants wrote up their talks for these proceedings Some of the papers are surveys and the others present original results This volume constitutes an overview of the current trends of research in several complex variables

### **Fifth International Congress of Chinese Mathematicians** Lizhen Ji, 2012

This two part volume represents the proceedings of the Fifth International Congress of Chinese Mathematicians held at Tsinghua University Beijing in December 2010 The Congress brought together eminent Chinese and overseas mathematicians to discuss the latest developments in pure and applied mathematics Included are 60 papers based on lectures given at the conference

**Kobayashi-Hyperbolic Manifolds** Alexander Isaev, 2007-03-11 In this monograph the author presents a coherent exposition of recent results on complete characterization of Kobayashi hyperbolic manifolds with high dimensional groups of holomorphic automorphisms These classification results can be viewed as complex geometric analogues of those known for Riemannian manifolds with high dimensional isotropy groups that were extensively studied in the 1950s 70s

**First International Congress of Chinese Mathematicians** Stephen Shing-Toung Yau, 2001 The International Congress of Mathematicians was an historical event that was held at the Morningside Center of Mathematics of the Chinese Academy of Sciences Beijing It was the first occasion where Chinese mathematicians from all over the world gathered to present their

research The Morningside Mathematics lectures were given by R Borcherds J Coates R Graham and D Stroock Other distinguished speakers included J P Bourguignon J J st M Taylor and S L Lee Topics covered in the volume include algebra and representation theory algebraic geometry number theory and automorphic forms Riemannian geometry and geometric analysis mathematical physics topology complex analysis and complex geometry computational mathematics and combinatorics Titles in this series are copublished with International Press Cambridge MA
