Atkins' Physical Chemistry 11e Peter Atkins, Julio De Paula, James Keeler, 2019-09-06 Atkins Physical Chemistry Molecular Thermodynamics and Kinetics is designed for use on the second semester of a quantum first physical chemistry course Based on the hugely popular Atkins Physical Chemistry this volume approaches molecular thermodynamics with the assumption that students will have studied quantum mechanics in their first semester The exceptional quality of previous editions has been built upon to make this new edition of Atkins Physical Chemistry even more closely suited to the needs of both lecturers and students Re organised into discrete topics the text is more flexible to teach from and more readable for students Now in its eleventh edition the text has been enhanced with additional learning features and maths support to demonstrate the absolute centrality of mathematics to physical chemistry Increasing the digestibility of the text in this new approach the reader is brought to a question then the math is used to show how it can be answered and progress made The expanded and redistributed maths support also includes new Chemist s toolkits which provide students with succinct reminders of mathematical concepts and techniques right where they need them Checklists of key concepts at the end of each topic add to the extensive learning support provided throughout the book to reinforce the main take home messages in each section The coupling of the broad coverage of the subject with a structure and use of pedagogy that is even more innovative will ensure Atkins Physical Chemistry remains the textbook of choice for studying physical chemistry

Advanced Concepts in Photovoltaics Arthur J. Nozik, Gavin Conibeer, Matthew C Beard, 2014-07-10 Photovoltaic systems enable the sun's energy to be converted directly into electricity using semiconductor solar cells The ultimate goal of photovoltaic research and development is to reduce the cost of solar power to reach or even become lower than the cost of electricity generated from fossil and nuclear fuels The power conversion efficiency and the cost per unit area of the photovoltaic system are critical factors that determine the cost of photovoltaic electricity Until recently the power conversion efficiency of single junction photovoltaic cells has been limited to approximately 33% the so-called Shockley Queisser limit This book presents the latest developments in photovoltaics which seek to either reach or surpass the Shockley Queisser limit and to lower the cell cost per unit area Progress toward this ultimate goal is presented for the three generations of photovoltaic cells the 1st generation based on crystalline silicon semiconductors the 2nd generation based on thin film silicon compound semiconductors amorphous silicon and various mesoscopic structures and the 3rd generation based on the unique properties of nanoscale materials new inorganic and organic photoconversion materials highly efficient multi junction cells with low cost solar concentration and novel photovoltaic processes The extent to which photovoltaic materials and processes can meet the expectations of efficient and cost effective solar energy conversion to electricity is discussed Written by an international team of expert contributors and with researchers in academia national research laboratories and industry in mind this book is a comprehensive guide to recent progress in photovoltaics and essential for any library or laboratory in the field
