

MACROECONOMICS

Meaning of Macroeconomics

Modern macroeconomics mainly owes to J.M. Keynes. His book, "The General Theory of Employment, Interest and Money" published in 1936 has analytically studied what causes large and prolonged fluctuations in the level of employment. Macroeconomics deals with the aggregates of the system. The word macro means large. Macroeconomics, thus, deals with the behaviour of various economic variables that refer to the economy as a whole. These variables are—total national income, aggregate employment, the extent to which the economy's resources are being fully employed, aggregate saving and investment, and the general price level in the economy. Thus, under macroeconomics we study economy as a whole.

Macroeconomics is the study of the behavior and performance of the economy as a whole.

According to Kenneth. E. Boulding, "Macroeconomics deals not with individual quantities as such, but with aggregates of these quantities, not with individual income, but with national income, not with individual prices but with price levels, not with individual outputs but with national output."

According to Gardner Ackley, "Macroeconomics concerns the overall dimensions of economic life. More specifically, macroeconomics concerns itself with such variables as aggregate volume of an economy, with the extent to which its resources are employed, with size of the national income, with the general price level, etc."

According to Mankiw, "Macroeconomics is the study of the economy as a whole—including growth in incomes, changes in prices, and the rate of unemployment. It attempts both to explain economic events and to advise policies to improve economic performance".

Finally we can say, Macroeconomics deals with total or aggregate level of output, aggregate level of consumption, aggregate level of investment, aggregate level of employment and general price level in economy.
