

Macroeconomics Exam 2 Study Guide

GDP Measuring Total Production and Income

Three most important indicators of the performance of an economy are...

- The growth rate of GDP
- The unemployment rate
- The inflation rate

GDP (Gross Domestic Product) – The market value of all final goods and services produced in a country during a period of time, typically one year

- ❖ GDP does not include the values of household production or production in the underground economy

Household Production – Refers to goods and services people produce for themselves such as, meals, cleaning, yard work, and childcare.

Underground Economy – The buying and selling of goods and services that is concealed from the government to avoid taxes or regulations or because the goods and services are illegal.

Final good or service – A good or service purchased by a final user

Intermediate good or service – A good or service that is an input into another good or service, such as a tire on a truck.

- ❖ The values of intermediate goods and services are included in the prices of final goods and services, we use only the values of final goods and services when computing GDP

What GDP Includes...

- Only the values of newly produced goods and services not the values of used goods that are sold
- Measures the value of the total production that occurs within the geographical boundaries of a country regardless of the citizenship of the producers. (it's about WHERE the production occurs)

Gross National Product (GNP) – Measures the value of the total production by the citizens of a country regardless of their geographical location. (It's about WHO does the producing)

Economic Capital and Risk Management in Islamic Finance Abdul Ghafar Ismail, Muhamed Zulkhibri, 2024-03-06 Economic capital is the subject of great debate among academics and professionals in the field of risk management Conceptually Islamic finance's encouragement of risk sharing eliminates the debt burden encountered by the conventional banking sector The majority of the Islamic banking system is based on equity based financing To be effective in practice a variety of well functioning institutions are required to translate Islamic banking concepts into a real world financial system In spite of this the regulatory legal product and operational requirements specific to Islamic banks may necessitate a distinct strategy for managing capital related risks This book provides a comprehensive review of the theoretical and practical aspects of Islamic economic capital in relation to contemporary Islamic finance Drawing on the risk sharing concept this book delves into the core concept of economic capital from an Islamic perspective including comparisons to conventional finance theory Furthermore it introduces alternative models and offers practical examples to strengthen the regulation and supervision of the Islamic banking system It also addresses critical policy challenges concerning economic capital in Islamic finance especially in dual banking countries This book seamlessly integrates new theory with empirical insights and discusses emerging themes including stress testing and Shari'ah compliance issues Most of the chapters are illustrated with real world cases and practical examples This book is intended for advanced degree students in finance and investment professionals as well as financial practitioners and advisors particularly those who are pursuing Islamic economics and finance courses
