Space Science and the Arab World Jörg Matthias Determann, 2018-01-29 When Sultan bin Salman left Earth on the shuttle Discovery in 1985 he became the first Arab first Muslim and first member of a royal family in space Twenty five years later the discovery of a planet 500 light years away by the Qatar Exoplanet Survey subsequently named Qatar 1b was evidence of the cutting edge space science projects taking place across the Middle East This book identifies the individuals institutions and national ideologies that enabled Arab astronomers and researchers to gain support for space exploration when Middle East governments lacked interest Jörg Matthias Determann shows that the conquest of space became associated with national prestige security economic growth and the idea of an Arab renaissance more generally Equally important to this success were international collaborations to benefit from American and Soviet expertise and technology Arab scientists and officials had to commit to

global governance of space and the common interests of humanity Challenging the view that the golden age of Arabic science and cosmopolitanism was situated in the medieval period Determann tells the story of the new discoveries and scientific collaborations taking place from the 19th century to the present day An innovative contribution to Middle East studies and history of science the book also appeals to increased business media and political interest in the Arab space industry

Yearbook on Space Policy 2006/2007 Kai-Uwe Schrogl,Charlotte Mathieu,Nicolas Peter,2008-10-20 The Yearbook on Space Policy aims to be the reference publication analyzing space policy developments Each year it presents issues and trends in space policy and the space sector as a whole Its scope is global and its perspective is European Perspectives on International Law Nandasiri Jasentuliyana,2023-10-09 In the spirit of the 50th anniversary of the United Nations and the United Nations Decade of International Law the contributors to Perspectives on International Law honour with this legal treatise a devoted friend of the United Nations and international law Judge Manfred Lachs a noted judge diplomat humanist and above all teacher The work includes a variety of perspectives on international law relating to what were Judge Lachs four main areas of interest the theory and practice of international law the United Nations the World Court and space law The book meets the need for a reference work covering selected subject areas and providing different perspectives on some of the key issues of current concern Many eminent experts in various fields related to international law including Judges of the International Court of Justice diplomats and professors of law most of whom knew Judge Lachs personally have contributed Each chapter has been prepared specifically for the book The contributors represent all political legal and cultural regions of the world and provide a range of backgrounds and viewpoints offering a variety of new ideas for strengthening international law based on their assessment of the lessons of the past **Weaponisation of Space: An Inevitable Reality and Plausible Fallout** Group Captain PA Patil,2017-01-15 Militarily use of spacebased assets when integrated with operations assumes importance as one of the many force multipliers As on date outer space is being extensively used by the armed forces for varied services which include navigation intelligence surveillance reconnaissance environmental monitoring and advance warning The command and control in today's netcentric environment also depends on space resources Thus the use of outer space with spacebased assets in support of military operations leads to the deduction that space as a medium stands militarised Of late many of the dominant nations have developed or are expanding capabilities to attack the spacebased assets of potential adversaries to disrupt command and control structures Countries like the US and China are contesting for space supremacy and working towards developing spacebased weapons capable of being delivered from spacebased platforms These developments in turn are infusing a sense of insecurity amongst other international players including India and have raised concerns worldwide Development of spacebased weapons by any state has the potential to ignite a new arms race in space as many countries now possess the wherewithal for launching spacebased assets capable of carrying the required payloads Thus from the present capability of militarisation of space we seem to be graduating towards

weaponisation of space As outer space has been designated as one of the global commons any sort of deployment or employment of space weapons raises concerns and any use of spacebased weapons will have unpleasant cascading effects In the absence of any international curb or law on space weaponisation it continues to be a conceptual possibility as well as an empirical reality **Technology for Large Space Systems** ,1990
