The Forgotten Pollinators Stephen L. Buchmann,Gary Paul Nabhan,2012-06-22 Consider this Without interaction between animals and flowering plants the seeds and fruits that make up nearly eighty percent of the human diet would not exist In The Forgotten Pollinators Stephen L. Buchmann one of the world s leading authorities on bees and pollination and Gary Paul Nabhan award winning writer and renowned crop ecologist explore the vital but little appreciated relationship between plants and the animals they depend on for reproduction bees beetles butterflies hummingbirds moths bats and countless other animals some widely recognized and other almost unknown Scenes from around the globe examining island flora and fauna on the Galapagos counting bees in the Panamanian rain forest witnessing an ancient honey hunting ritual in Malaysia bring to life the hidden relationships between plants and animals and demonstrate the ways in which human society affects and is affected by those relationships

Buchmann and Nabhan combine vignettes from the field with expository discussions of ecology botany and crop science to present a lively and fascinating account of the ecological and cultural context of plant pollinator relationships More than any other natural process plant pollinator relationships offer vivid examples of the connections between endangered species and threatened habitats The authors explain how human induced changes in pollinator populations caused by overuse of chemical pesticides unbridled development and conversion of natural areas into monocultural cropland can have a ripple effect on disparate species ultimately leading to a cascade of linked extinctions **The Monarch Butterfly** Karen Suzanne
