Mono Olefins Chemistry And Technology:

Mono-Olefins F. Asinger, 2013-10-22 Mono Olefins Chemistry and Technology is a translation from the German and deals with the study of olefins from low ethylene to hexenes and olefins from the high hexenes to eicosenes The book describes the gaseous or low boiling olefins and the higher normally liquid olefins which have only a minor role in applications in the chemical industry The olefins are considered important as they are added in the distillation of off gases in refineries Although the liquid olefins are used sparingly these are needed to manufacture lubricants synthetic detergents and the higher aliphatic alcohols The book then explains the three processes used to separate olefin containing mixtures of gases into fractions by the C number or to convert olefins in the pure state distillation absorption and adsorption The author then describes the processes in manufacturing carburetor fuel from petroleum and natural gases Petroleum oil is a mixture of paraffinic naphthenic and aromatic hydrocarbons and has no olefins The text describes the complete process of refining petroleum into different products such as gasoline kerosene lubricants and spotting benzenes Then the book explains the polymerization of olefins to produce carburetor fuels either by the thermal method or catalytic method The text notes some research made into double bond isomerization in mono olefins and their possible applications This book is beneficial to industrial chemists researchers technical designers and engineers whose works are related with oil refinery and fossil fuels **Mono-olefins ;**

Chemistry and Technology. Asinger Friedrich Asinger, 1968 Mono-Olefins Friedrich Asinger, 1968 *The Chemistry and Technology of Petroleum* James G. Speight, 1999-01-21 The Chemistry and Technology of Petroleum Third Edition fully covers the subject from the underground formation of petroleum to recovery of refined products The third edition contains additional chapters on the structure of petroleum refining heavy feedstocks instability and incompatibility in petroleum products environmental aspects of refin The Chemistry and Technology of Petroleum, Fifth Edition James G. Speight, 2014-02-26 With demand for petroleum products increasing worldwide there is a tendency for existing refineries to seek new approaches to optimize efficiency and throughput In addition changes in product specifications due to environmental regulations greatly influence the development of petroleum refining technologies These factors underlie the need for this fifth edition of The Chemistry and Technology of Petroleum which continues in the tradition of the bestselling fourth edition proving readers with a detailed overview of the chemistry and technology of petroleum as it evolves into the twenty first century The new edition has been updated with the latest developments in the refining industry including new processes as well as updates on evolving processes and various environmental regulations The book covers issues related to economics and future refineries examines the changing character of refinery feedstock and offers new discussions on environmental aspects of refining It contains more than 300 figures and tables including chemical structures and process flow sheets A useful reference for scientists and engineers in the petroleum industry as well as in the catalyst manufacturing industry this book introduces readers to the science and technology of petroleum beginning with its formation in the ground

and culminating in the production of a wide variety of products and petrochemical intermediates

Encyclopedic Dictionary of Named Processes in Chemical Technology Alan E. Comyns, 2010-12-12 This reference provides concise descriptions of those chemical processes that are known by special names which are not obvious or self explanatory. Containing 2 600 entries this second edition includes information on the many new processes developed and commercialized as well as new information on old processes. Encyclopedic Dictionary of Named Processes in Chemical Technology presents a heterogeneous collection of names inventors companies institutions places acronyms abbreviations and obvious corruptions of the chemical nomenclature. The author has tailored the entries to reflect importance and topicality. Generally the processes in current use have the longest entries however he also devotes more space to some obsolete processes that hold particular technical interest or historical significance. The appendix is an index to product names enabling readers to identify processes used for making particular products.

Advances in Fischer-Tropsch Synthesis, Catalysts, and Catalysis B. H. Davis, Mario L. Occelli, 2009-11-10 Rising oil costs have stimulated significant interest in the Fischer Tropsch synthesis (FTS) as a method for producing a synthetic petroleum substitute. Drawn from the proceedings at a symposium held during the 236th meeting of the American Chemical Society in Philadelphia in August 2008, *Advances in Fischer Tropsch Synthesis Catalysts and Catalysis* presents a comprehensive review of the Fischer Tropsch process. The Fischer Tropsch process is gaining recognition again due to the world wide increase in energy needs and decrease in oil availability. The increasing interest in utilizing biomass as a potential renewable feedstock in energy generation is further supporting this development. The book covers the production and refining of Fischer Tropsch syncrude to fuels and chemicals systematically and comprehensively presenting a wealth of new knowledge and material. As such it deals extensively with aspects of engineering chemistry and catalysis. This handbook and ready reference adopts a fundamental approach looking at the molecules and their transformation from feed to product. Numerous examples illustrate the possibilities and limitations of Fischer Tropsch syncrude as feedstock. Of great interest to everyone interested in refining not just Fischer Tropsch specialists. From the Contents: Fischer Tropsch Facilities and Refineries at a Glance; Production of Fischer Tropsch Syncrude; Industrial Fischer Tropsch Facilities; Synthetic Transportation Fuels; Refining Technology; Refinery Design.

Hydrocarbon Chemistry George A. Olah, Árpád Molnár, 2003-09-10 Hydrocarbons and their transformations play major roles in chemistry as raw materials and sources of energy. Diminishing petroleum supplies, regulatory problems and environmental concerns constantly challenge chemists to rethink and redesign the industrial applications of hydrocarbons. Written by Nobel Prize winner George Olah and hydrocarbon expert Árpád Molnár, the completely revised and expanded Second Edition of *Hydrocarbon Chemistry* provides an unparalleled contemporary assessment of the field, presenting basic concepts, current research and future applications. *Hydrocarbon Chemistry* begins by discussing the general aspects of hydrocarbons: the separation of hydrocarbons from natural sources and the synthesis from C1 precursors with recent developments for possible future applications. Each successive chapter deals with a specific type of

hydrocarbon transformation The Second Edition includes a new section on the chemical reduction of carbon dioxide focusing on catalytic ionic electrocatalytic photocatalytic and enzymatic reductions as well as a new chapter on new catalysts and activation methods combinatorial chemistry and environmental chemistry Other topics covered include Major processes of the petrochemical industry such as cracking reforming isomerization and alkylation Derivation reactions to form carbon heteroatom bonds Hydrocarbon oxidations Metathesis Oligomerization and polymerization of hydrocarbons All chapters have been updated by adding sections on recent developments to review new advances and results Essential reading for practicing scientists in industry polymer and catalytic chemists as well as researchers and graduate students Hydrocarbon Chemistry Second Edition remains the benchmark text in its field Encyclopedic Dictionary of Named Processes in Chemical Technology, Fourth Edition Alan E. Comyns, 2014-02-21 Since the third edition of this reference was completed there have been major changes in the global chemical industry With less emphasis on new processes for making basic chemicals and more emphasis on pollution prevention and waste disposal petrochemical processes are giving way to biochemical processes These changes are reflected in the new processes being developed many of which have their own names In addition niche improvements are still being made in petrochemistry and some of these processes have new names as well Gathering and defining a large portion of special named processes that may fall outside standard chemical texts or be scattered among industry manuals Encyclopedic Dictionary of Named Processes in Chemical Technology Fourth Edition provides a single source reference on an extensive array of named processes It provides concise descriptions of those processes in chemical technology that are known by special names that are not self explanatory While overviews of the chemical technology industry are present in other books most of the names defined within this volume are unique to this compilation This reference includes named processes in current commercial use around the world processes that have been or are being piloted on a substantial scale and even obsolete processes that have been important in the past The length of the dictionary entries reflects their importance and topicality The text includes references that document the origins of the processes and review the latest developments Written by a highly experienced and respected author this user friendly text is presented in a practical dictionary format that is useful for a broad audience including industrial chemists and engineers Hydrocarbon Chemistry, 2 Volume Set George A. Olah, Arpad Molnar, G. K. Surya Prakash, 2017-10-02 This book provides an unparalleled contemporary assessment of hydrocarbon chemistry presenting basic concepts current research and future applications Comprehensive and updated review and discussion of the field of hydrocarbon chemistry Includes literature coverage since the publication of the previous edition Expands or adds coverage of carboxylation sustainable hydrocarbons extraterrestrial hydrocarbons Addresses a topic of special relevance in contemporary science since hydrocarbons play a role as a possible replacement for coal petroleum oil and natural gas as well as their environmentally safe use Reviews of prior edition literature coverage is comprehensive and ideal for quickly reviewing specific topics of most value to industrial chemists
