Immunological Approaches to the Diagnosis and Therapy of Breast Cancer G.P. Talwar,2012-12-06 Once again we have gathered to discover and evaluate advances made in our ability to understand diagnose and possibly treat breast cancer with the new reagents provided by monoclonal antibody techniques In the last two years since our first International Workshop on Monoclonal Antibodies and Breast Cancer there has been an enormous surge in the number and quality of applications for these new reagents Solid achievements have been made in identification and quantitation of estrogen and progesterone receptors in histopathological diagnostic procedures in serum diagnosis and we are witnessing now the first attempts to treat breast cancer with immunoconjugates Cytosolic estrogen receptors can now be quantitated with monoclonal antibodies and also their cellular distribution can be directly assessed histologically In addition monoclonal antibodies to progesterone receptors have been generated that show promise in having similar uses as those to the estrogen receptor In the field of diagnosis the use of monoclonal antibodies has permitted the development of serological approaches for early diagnosis by identifying and measuring breast epithelial antigens in serum and of histological approaches for establishing criteria for breast cancer dissemination and prognosis With great expectations we are all following developments in the area of breast cancer treatment using conjugates of anti breast epithelial monoclonal antibodies which are now confirming earlier reports in affecting breast tumor control The recent creation of newer monoclonal antibodies and conjugates await experimentation and clinical trials to determine their value **Monoclonal Antibodies and Immune**

Advances in Cancer Biomarkers Roberto Scatena,2015-11-03 At present there are a growing number of biomolecules under investigation to understand their potential role as cancer biomarker for diagnostic prognostic and therapeutic purposes Intriguingly the state of art on cancer biomarkers research shows interesting and promising results together to clamorous failures Also from a clinical point of view there are contradictory results on routine clinical use of the present cancer biomarkers Some patients may be simply monitored in their course by a periodic blood sample but sometimes this monitoring shows dramatic limits A lot of patients

show serious and extensive relapses without significant change in serum concentrations of biomarkers tested Often the physician who should utilize these biomarker does not entirely know their limits and the total potential applications as well and sometimes this knowledge is influenced by economical and marketing strategies This limited and polluted knowledge may have dramatic consequences for patient The aim of this book is to diffuse all aspects of cancer biomarkers from their biochemical peculiarities to all clinical implications by passing through their physiology and pathophysiology This critical approach towards old and new cancer biomarkers should foster a deepened and useful understanding of the diagnostic and prognostic index of these fundamental parameters of laboratory medicine and in the same time facilitating the research of new and more sensitive specific signals of the cancer cell proliferation International Symposium on Labeled and Unlabeled Antibody in Cancer Diagnosis and Therapy ,1987 **Progress in Controlling Breast Cancer** United States.
