**Ganglioside Structure, Function, and Biomedical Potential** Robert W. Ledeen, 2012-12-06 This volume contains the proceedings of the symposium on Ganglioside Structure Function and Biomedical Potential which was held at Parksville Vancouver Island B C Canada on July 6 10 1983 The symposium was organized as a satellite to the ninth meeting of the International Society for Neurochemistry held immediately afterward in Vancouver City B C Close to 50 speakers from 9 countries presented papers on a wide range of topics on the ganglioside theme These encompassed the many aspects of basic research that have evolved over the past half century as well as some newer topics relating to the biomedical potential of gangliosides as therapeutic agents One of the purposes of the meeting was to encourage dialogue between investigators in these seemingly diverse areas in the hope that each would come away with fresh perspective toward his own work Judging from the many spirited informed discussions that took place throughout the four day meeting this goal was achieved The charm and beauty of Vancouver Island undoubtedly contributed to the congenial atmosphere which quickly developed among the 120 or so participants Drawn from 13 countries of Europe East and West America North and South Asia and the Middle East this gathering reflected the broad geographical scale on which ganglioside research is now conducted That this field is still in its logarithmic stage of growth is indicated by the increasing number of citations appearing each year in the various abstracts e g fig next page

*Basic and Clinical Pharmacology* Carlo Patrono, Bernhard A. Peskar, 2012-12-06 Thirty years have elapsed since the first description by S A BERSON and R S Y ALOW of the basic principles of radioimmunoassay RIA During this period of time RIA methodology has been instrumental to the growth of many areas of biomedical research including endocrinology oncology hematology and pharmacology It has done so by providing a relatively simple universal tool allowing for the first time the detection of endogenous mediators that are present 12 10 in body fluids at concentrations as low as  $10^{-10}$  M The fundamental nature of this discovery and the wide ranging fall out of basic and clinical knowledge derived from its application have been acknowledged by the many honors tributed to its pioneers including the Nobel Prize awarded to Dr Y ALOW 10 years ago Although several excellent books have been published during the past decades covering various aspects of RIA methodology we felt the need as pharmacologists for a comprehensive discussion of the methodological and conceptual issues related to the main classes of mediators of drug action and to drugs themselves Thus we gladly accepted the challenge provided by the invitation to edit a volume of the Handbook of Experimental Pharmacology on Radioimmunoassay in Basic and Clinical Pharmacology We tried to balance the emphasis placed on more general aspects of the RIA methodology and that on specific mediators *Autoimmunity and the Pathogenesis of Diabetes* Fredda

Ginsberg-Fellner, Robert C. McEvoy, 2012-12-06 It has been a challenge for us to edit this volume of Endocrinology and Metabolism Progress in Research and Clinical Practice The topic of the pathogenesis of insulin dependent type I diabetes mellitus is particularly appropriate for this series since advances in this area have been made to a large extent by applying state of the art laboratory techniques to clinical samples Over the last several years a number of lines of evidence have been gathered suggesting that classic type I diabetes mellitus results from the autoimmune destruction of pancreatic beta cells in genetically susceptible individuals This hypothesis is particularly appealing because it offers a rational approach to the prevention of diabetes by immunosuppression We have tried to present a balanced authoritative summary of the information currently available to support the autoimmune hypothesis for the pathogenesis of human type I diabetes to place this information in historical perspective to include relevant information from animal models of type I diabetes in which more invasive experimentation is ethical and finally to update the reader on the current status of attempts to intervene in the progression of diabetes with immunosuppressive drugs New York New York Fredda Ginsberg Fellner Robert C McEvoy Contents Preface v Contributors xi 1 The Autoimmune Hypothesis of Insulin Dependent Diabetes 1965 to the Present

*Clinical Chemistry* N.C. den Boer, 2012-12-06 The XIIIth International and the VIIth European Congress of Clinical Chemistry took place at the Netherlands Congress Centre in The Hague from June 28th to July 3rd 1987 The Organizing Committee and the Scientific Committee for these combined congresses aimed to present the state of the science as well as the state of the art for those fields of clinical chemistry which show a strong progress and which will most probably inflict a great part of all clinical chemists Clinical Chemistry an Overview comprises almost all papers which were presented during

the congress in 5 plenary lectures and 97 lectures during 24 symposia The invited speakers being experts in their fields of clinical chemistry succeeded very well in presenting an overview over the newest developments in connection to the knowledge already known thereby demonstrating the progress made in clinical chemistry during the last years The Editors take great pleasure in thanking once more the members of the Scientific Committee and of the International Scientific Advisory Board in creating an excellent scientific programme for this congress The Editors also take great pleasure in thanking all those whose efforts have made possible the publication of this book We are most grateful to all speakers who also prepared a manuscript for publication The Editors also appreciate the most helpful and encouraging attitude of Plenum Press Publishers Corporation Lymphoproliferative Diseases: Pathogenesis, Diagnosis, Therapy P.K. McGregor, 2012-12-06 Nineteen eighty six is a most appropriate year in which to be writing about developments in the organ specific autoimmune endocrine

diseases It celebrates the publication 30 years ago in 1956 of the classic papers of Roitt and Doniach and their co workers 1 and of Rose and Witebsky<sup>2</sup> and Adams<sup>3</sup> and Purves These three sets of fundamental observations provided the initial building blocks upon which much of what has been established in the field in the last 30 years was built No publication of this nature on endocrine autoimmune disease can cover every aspect of the subject I have chosen to highlight the organs thyroid and pancreas which have attracted the most attention and the areas of work within these fields within which most research effort is currently focused There are still some gaps the insulin and TSH receptors are not considered nor in any detail are the role of cytotoxic mechanisms in mediating gland destruction Molecular biology will undoubtedly in the next few years clarify once and for all the controversy that surrounds the structure of the TSH receptor and T cell cloning the role of cell mediated cytotoxicity The pathogenetic mechanisms underlying autoimmunity are increasingly well understood and the search for the aetiology has begun Immunoregulatory Role of Thymus Marek P. Dabrowski, B.

Dabrowska-Bernstein, 2019-06-04 First published in 1990 This important new text covers a wide area of thymology in both the theoretical and practical aspects In view of current information a crucial role of endocrine thymus is presented in the creation maintenance and senescence of neuro endocrine immune homeostasis In particular mechanisms are described which are basically responsible for the T cell maturation and selection for the hierarchic organization of the immune system and its thymic dependent immune competence in terms of tolerance and immunity A detailed presentation of the structure and biological properties of a number of well defined thymic hormones is included Their clinical applications and results obtained in inherited or acquired immunodeficiencies and in neoplastic diseases are also reviewed on the grounds of numerous representative clinical trials A perspective and potential scope of immunorestorative therapy and prevention with thymic hormones and other thymomimetic drugs are outlined Researchers practitioners and students will find this book to be a useful and essential source of information Advances in Immunology, 1984-09-20 Advances in Immunology **The**

**Autoimmune Diseases** Bozzano G Luisa, 2012-12-02 The Autoimmune Diseases is composed of 25 chapters dealing with different aspects of some specific autoimmune diseases The book begins with the elucidation of the genetic predisposition to autoimmune diseases Subsequent chapters explore numerous kinds of autoimmune diseases Other chapters describe the antireceptor antibodies and the sensitivity and specificity of autoantibody testing This book is designed to provide a deeper understanding of this increasingly important field of medical science for physicians and investigators involved in the diagnosis treatment or research of autoimmune diseases **Ion Channel Reconstitution** C. Miller, 2013-11-09 It is now

over 30 years since the idea of ion conducting pores burst on the electrophysiological scene 15 years since these were generally realized to be membrane spanning proteins and 10 years since the first observations of single ion channels from higher organisms were made During the past 5 years several integral membrane channel proteins have been purified in a functionally competent state the nicotinic acetylcholine receptor the Na channel mitochondrial VDAC and a variety of porins

The stage is thus set to attack ion channels in the same ways that biochemists have been attacking enzymes for decades isolation followed by functional analysis in as simple a system as possible with a view towards understanding the molecular mechanisms of the protein's behavior and how this is related to the underlying molecular structure This is always a daunting task all the more so with ion channels because of our still primitive and scanty understanding of channel structures and because of the difficulty in isolating functionally active channel proteins In this volume which can be considered a biochemically slanted companion to Sakmann and Neher's *Single Channel Recording* I have tried to present a view of the current landscape of ion channel reconstitution These chapters illustrate not only the different approaches and techniques of the major practitioners of ion channel reconstitution but as importantly the varied motivations for doing this kind of work

Pinchera, 2012-12-06 In 1956 three groups independently reported evidence that some thyroid disease appearing spontaneously in humans or experimentally induced in animals are related to autoimmune processes The interval between these landmark discoveries and the present has witnessed a remarkable and continuing growth of both knowledge and concepts concerning the mechanisms of immune regulation the pathogenesis of autoimmune thyroid diseases and their clinical and laboratory manifestations More importantly knowledge of thyroid autoimmunity has in many respects comprised the vanguard of an ever increasing appreciation and understanding of autoimmune diseases in general On November 24-26 1986 an International Symposium on Thyroid Autoimmunity was held in Pisa Its purpose was to commemorate the birth of thyroid autoimmunity as a scientific discipline to summarize current knowledge and concepts in this area and where possible to anticipate areas of opportunity for the future hence the theme of the Symposium Memories and Perspectives To open the meeting the Magnifico Rettore Chancellor of the University of Pisa granted special Awards to Dr Deborah Doniach Dr Ivan Roitt and Dr Noel R Rose who published the first fundamental studies in the field of thyroid autoimmunity and to Dr Duncan G Adams whose discovery of the long acting thyroid stimulator LATS opened the door to our current understanding of the pathogenesis of Graves disease During the meeting thirty plenary lectures were presented *Biological Contaminants in Indoor Environments* Philip R.
