Monoclonal Antibody Therapy In Hematologic Malignancies:

Monoclonal Antibody Therapy for Hematologic Malignancies John C. Byrd, 2003 *Monoclonal Antibody Therapy for Hematologic Malignancies* ,2000 **Monoclonal Antibody Therapy for Hematologic Malignancies** ,2000

Monoclonal Antibody Therapy of Hematologic Malignancies Bruce D. Cheson, 2001 **Immunoconjugate Therapy of Hematologic Malignancies** Steven T. Rosen, Timothy M. Kuzel, 2012-12-06 The hybridoma technique for producing monoclonal antibodies developed by Drs Kohler and Millstein in 1975 revolutionized the field of tumor immunology It is now clear that there are antigens associated with or restricted to human neoplasms that have biologic significance Monoclonal antibodies have already been demonstrated to have great immunodiagnostic value and it is anticipated that they will become a component of our therapeutic armamentarium Most investigators in the field however feel that the true potential of monoclonal antibodies in cancer therapy remains to be determined Clearly the most encouraging results have been witnessed in the treatment of hematologic malignancies This volume of CANCER TREATMENT AND RESEARCH explores the current state of the art of immunoconjugate therapy of hematologic malignancies Immunoconjugate Therapy of Hematologic Malignancies provides an update of a rapidly advancing field The preliminary experience of a number of investigators suggests a role for targeted therapy in the treatment of hematologic malignancies At the present time immunoconjugates have in most instances been reserved for patients with advanced refractory disease However it is anticipated in the future that these reagents will be utilized as a complement to traditional therapy or as post remission consolidation in patients with minimal residual disease The obstacles have been defined solutions will require further research and creative imagination **Management of Hematologic Malignancies** Susan O'Brien, Julie M. Vose, Hagop M. Kantarjian, 2010-11-18 Hematologic malignancies were the first human cancers to be studied in depth at the molecular level and recent years have seen important advances in treatment This comprehensive reference book covers the full range of hematologic malignancies including all subtypes of leukemias lymphomas and plasma cell dyscrasias Authored by internationally known experts each chapter emphasizes diagnostic work up staging and therapeutic approaches Up to date hematopathology treatment and outcomes data are presented in a way which is directly applicable to patient care Highly illustrated with color images graphs flowcharts and treatment algorithms the book is perfect for quick clinical reference as well as providing detailed reference lists for further study With its authoritative and practical focus and visually stimulating presentation this is a key text for hematology and oncology fellows physicians oncology nurses physician assistants and other healthcare workers in the field of oncology *Monoclonal Antibody Therapies for Hematologic Malignancies* American Society of Hematology, 2000 **Biotherapy** Paula Trahan Rieger, 2001 Rieger U of Texas M D Anderson Cancer Center synthesizes knowledge about this rapidly expanding field to help other nurses understand its biological basis and clinical indications Targeted at oncology nurses the text will also be of interest in other specialties using

biological agents to treat **Targeting the Microenvironment Niche in Hematologic Malignancies** Cirino Botta, Niccolò Bolli, Marco Rossi, Niels Weinhold, 2022-02-02 **Macromolecular Anticancer Therapeutics** L. Harivardhan Reddy, Patrick Couvreur, 2010-03-20 In spite of the development of various anticancer drugs the therapy of cancer has remained challenging for decades The current therapy of cancer is overwhelmed because of the inability to deliver therapeutics to all regions of a tumor in effective therapeutic concentrations intrinsic or acquired resistance to the treatment with currently available agents via genetic and epigenetic mechanisms and toxicity As a result cancer therapy using conventional therapeutics and different types of treatment regimens using this therapeutics has not led to a convincing survival benefit of the patients In this context Macromolecular therapeutics offer several advantages over conventional low molecular therapeutics by various ways such as enable the use of larger doses of these agents by limiting the toxicity by enhanced permeability and retention into tumors by tumor targeting using tumor specific antibodies by specific inhibition of oncogenes using anticancer oligonucleotides etc Cancer treatment using this macromolecular therapeutics has considerably improved the survival benefit for patients As a result various macromolecular therapeutics are already commercialized or are under clinical development Although we are far from a real magic bullet today looking at the pace of research and current success in this field of macromolecular therapeutics it appears that we are approaching a magic bullet for the efficient treatment of cancer Thus we believe that the subject of this book is very timely and that the book will fill an unmet need in the market This book is unique and assembles various types and aspects of macromolecular anticancer therapeutics for cancer therapy in one shell and conveys the importance of this interdisciplinary field to the broad audience Thus in a nutshell this book details the basics of cancer and various therapeutic strategies such as those based on macromolecular therapeutics hence can become an important reference for practitioners oncologists medical pharmacologists medicinal chemists biomedical scientists experimental pharmacologists pharmaceutical technologists and particularly it can essentially become a handbook of macromolecular therapeutics for cancer therapy for graduates post graduates and Ph D students in these fields

Pulmonary Involvement in Patients with Hematological Malignancies Elie Azoulay, 2011-04-15 The number of patients treated for hematological malignancies is increasing steadily To maximize cure rates aggressive treatments have been introduced including high dose chemotherapy stem cell transplantation and targeted therapies As a result overall and disease free survival rates have improved substantially but at the price of life threatening toxic and infectious complications that chiefly target the lung This book provides clinicians caring for patients with hematological malignancies with detailed up to date information on all relevant aspects of pulmonary involvement Individual sections are devoted to epidemiology diagnostic strategy lung infections non infectious pulmonary involvement and treatment including decision making in patients with acute respiratory failure Each of these sections contains a number of chapters all written by leading international experts In addition the reader's attention is drawn to important pearls relating to each condition Advances in Hematologic
