Lamming, 2013-04-17 The most comprehensive review available today Marshall s Physiology of Reproduction is the classic reference source for teachers and researchers of animal reproduction Internationally recognised leaders in their respective fields provide an analytical synopsis of the area review current research and outline their philosophical approach to the subject Volume 3 of the fourth edition reviews the processes of pregnancy and lactation in mammals incorporating marsupials non primate eutherians and primates including man Book one covers pregnancy from ovulation to pre parturition book two reviews fetal physiology parturition and lactation The extensive coverage of the physiology of human reproduction and lactation makes this volume a particularly important reference source for researchers in human fertility control while the review of large animal reproduction is relevant to veterinary and para veterinary workers *Advances in the Study of Behavior*, 1992-05-14 *Advances in the Study of Behavior* remains one of the most turned to sources for penetrating insight on the latest findings in behavior research This serial has kept pace with the vigorous multidisciplinary growth of the field and covers all major aspects from ecology to endocrinology in both human and animal subjects Critical reviews presentations of major research programs and

communication of significant new concepts provide readers with an up to date overview of the latest developments in this field The series does not focus narrowly on one or a few fields but features articles covering the best behavioral work from a wide spectrum The skill and concepts of scientists in such diverse fields necessarily differ making the task of developing cooperation and communication among them a difficult one But it is one that is of great importance and one to which the editors and publisher of *Advances in the Study of Behavior* are committed Each volume of *Advances in the Study of Behavior* contains an index and each chapter includes references

Brenner, 2012-12-06 It is a genuine honor and a privilege of distinction to provide the foreword for the proceedings that follow This marvelous symposium reflects the unique qualities of its two principal sponsors Whenever the Oregon Regional Primate Research Center is involved in matters of science we see a consistent record of exceptional quality in both the work is unequalled and the people who do it Likewise Sero Symposia USA in assuring a world class speakers forum utterly without taint of commercial influence The proceedings published herein are a remarkable testimony not only to the contributors but to Drs Brenner Wolf Stouffer and Burnett who have shepherded its conception presentation and publication Readers will notice immediately one of the universal strengths of this total composition that is the diversity of investigational interests among attendees Presentations on the core topic of primate in vitro fertilization and embryo transfer were joined by specialist presentations in related areas including human assisted reproductive technologies reproductive physiology of the great apes sperm biology implantation mechanisms cryobiology coculture systems for embryogenesis micromanipulation technologies and genetic diagnosis of heritable diseases in the pre embryo Even though

pro fertility issues understandably dominated this forum there was significant attention given to fertility control research especially the role of primates in this endeavor more on this subject below

Drugs and Behavior Fred Leavitt, 1995 What are the effects of psychoactive drugs on aspects of human behaviour such as creativity memory and sexuality How effective are such drugs in treating mental disorders How are new drugs tested and licensed An intriguing introduction to the study of psychopharmacology this fully revised and updated edition of *Drugs and Behavior* presents a unique analysis of the ways in which human behaviour is affected by drugs rather than simply by categories of drugs The text covers the principles of neurotransmission pharmacokinetics and drug classification Issues of new drug development including drug dangers and benefits legalization and the prevention and treatment of drug abuse are also discussed

The Evolving Female Mary Ellen Morbeck, Alison Galloway, Adrienne Zihlman, 1996-12-09 A human female is born lives her life and dies within the space of a few decades but the shape of her life has been strongly influenced by 50 million years of primate evolution and more than 100 million years of mammalian evolution How the individual female plays out the stages of her life from infancy through the reproductive period to old age and how these stages have been formed by a long evolutionary process is the theme of this collection Written by leading scholars in fields ranging from evolutionary biology to cultural anthropology these essays together examine what it means to be female integrating the life histories of marine mammals monkeys apes and humans The result is a fascinating inquiry into the similarities among the ways females of different species balance the need for survival with their role in reproduction and mothering *The Evolving Female* offers an outlook integrating life history with an intimate examination of female life paths Behavior anatomy and physiology growth and development cultural identity of women the individual and the society are among the topics investigated In addition to the editors the contributors are Linda Fedigan Kathryn Ono Joanne Reiter Barbara Smuts Mariko Hiraiwa Hasegawa Mary McDonald Pavelka Caroline Pond Robin McFarland Silvana Borgognini Tarli and Elena Repetto Gilda Morelli Patricia Draper Catherine Panter Brick Virginia J Vitzthum Alison Jolly and Beverly McLeod

Chemical Signals in Vertebrates 9 Anna Marchlewska-Koj, John J. Lepri, Dietland Müller-Schwarze, 2012-12-06 It is generally accepted that the recent progress in molecular and cellular biology would not have been possible without an understanding of the mechanisms and signaling pathways of communication inside the cell and between various cells of the animal organism In fact a similar progress occurred in the field of chemical communication between individual organisms of

vertebrate species and this volume is aimed at presenting the current state of the art on this subject. The reader can find here both original results obtained in the laboratory or field studies and comprehensive reviews summarizing many years of research. The presentations of over 60 scientists have been grouped according to their approach into nine parts covering such fields as ecological and evolutionary aspects of chemical communication structure and neuronal mechanisms of chemosensory systems, chemical structure of pheromones and binding proteins, kin individual and sexual recognition, predator-prey relationships, purpose and consequences of marking behavior, scent signals and reproductive processes. Expanding on former volumes of this series, entirely new chapters have been added on prenatal chemical communication describing specific effects of the intrauterine environment. In many cases a truly multidisciplinary approach was required such as with the population analysis of polymorphic variants of the mouse's major urinary proteins that function in carrying pheromones.

NIDA Research Monograph, 1976 The Maternal Fetal Interface Anthony Carter, Vibeke Dantzer, Thomas Jansson, 1998

The 29 papers contained in this volume look closely at various aspects of what is termed The Maternal Fetal Interface as it relates to the latest research in placental science. A substantial section of the book is devoted to the troublesome question of vertical transmission of infectious agents, namely the HIV 1 virus. However, other sections of the volume examine related issues such as drug and toxin transfer across the term placenta and the diversity of placental types and how this can affect a placenta's effectiveness as a barrier. Anthony Carter is at the University of Odense, Denmark. Vibeke Dantzer is at the University of Copenhagen, Denmark. Thomas Jansson is at the University of Gothenburg, Sweden. Transgenic Fish Choy Leong Hew, Garth L. Fletcher, 1992-06-16. Studies on transgenic fish in contrast to mammals are still in their infancy. However, it is evident that such fish will not only be of considerable economic benefit to aquaculture but will enable scientists to make quantum leaps in their understanding of the physiological and biochemical mechanisms unique to fish and of the developmental biology of vertebrates in general. The potential of transgenic fish for research and industrial development is beginning to be widely recognized. This timely volume encompasses the full spectrum of current research on transgenic fish. It will be valuable to many scientists who intend to explore the merits of the technology for the first time. *Long-term*
