Pathogenic and Non-pathogenic Amoebae Baij Nath Singh, 1975 *Pathogenic and Non-Pathogenic Amoebae* B. N. Singh, 2013-12-31 **Surgical Pathology of the Gastrointestinal System: Bacterial, Fungal, Viral, and Parasitic Infections** Laura W. Lamps, 2011-04-08

Surgical Pathology of the Gastrointestinal System Bacterial Fungal Viral and Parasitic Infections provides a unique diagnostic reference text for the pathologic diagnosis of infectious diseases of the gastrointestinal tract. Written for the practicing surgical pathologist, this text combines the superior illustrations of an atlas with carefully written prose to create a useful diagnostic companion. The text is divided into four sections covering bacterial, fungal, viral, and parasitic infections of the gastrointestinal tract. The descriptive sections of each chapter are organized into short paragraphs for easy reference and include the use of tables to compare and contrast organisms and summarize differential diagnoses. Each chapter is extensively illustrated and contains prose discussions of diagnostic features, differential diagnoses, brief clinical descriptions, and ancillary tests that help confirm the diagnosis, i.e., immunohistochemistry, special histochemical stains, and molecular diagnostic techniques. Surgical Pathology of the Gastrointestinal System Bacterial Fungal Viral and Parasitic Infections provides pertinent clinical, diagnostic, and epidemiologic information that will be valuable to the practicing surgical pathologist. This volume will also help surgical pathologists gain familiarity with other contributory laboratory tests that are available to help confirm diagnosis.

The Cell Biology of Protist Parasite-Host Interfaces Carmen Faso, Adrian Hehl, 2022-04-28 **Amoebae as Host Models to Study the Interaction with Pathogens** Sascha Thewes, Thierry Soldati, Ludwig Eichinger, 2019-08-27

The human body is constantly faced with microorganisms. Most of these bacteria, fungi, and viruses are harmless; many of them are beneficial, and a small fraction is pathogenic. For humans, infection with pathogenic microorganisms can be very serious or even fatal, ranging from mild, transient or chronic infections to death. The first line of defence against pathogens is our innate immune system. Beside chemical and physical defence mechanisms of the innate immune system, phagocytic cells such as macrophages play a crucial role in the fight against pathogenic microorganisms. However, phagocytic cells and pathogens are in a constant evolutionary arms race, inventing new strategies to successfully kill pathogens and learning how to resist phagocytosis and intracellular killing, respectively. If pathogens are not obligatorily adapted to the human body or other animals, they also have to face environmental phagocytes in the form of amoebae. Many aspects of phagocytosis and intracellular killing are surprisingly well conserved between amoebae and macrophages. Therefore, pathogens that have evolved with environmental amoebae as their training grounds can also be successful during infection of macrophages and other animal phagocytic cells. In this Research Topic, we provide the latest knowledge about the potential of using amoebae as host models to study the interaction with pathogens. The Research Topic covers the interaction of amoebae with bacteria, fungi, and viruses and also illustrates the similarities and differences between amoebae and macrophages. Investigation of evolutionary conserved pathways of amoebae and macrophages furthers our

understanding of the biology of host pathogen interactions and helps to develop new anti infection therapies *New advances in the biology and pathogenesis of free-living amoebae* Isabel Marcelino, Ascel Samba-Louaka, Christopher A. Rice, 2024-05-06 Free living amoebae FLA are fascinating unicellular eukaryotes living freely in soil and freshwater habitats and feeding mainly on bacteria Under stressful conditions they can transform from a motile metabolically active and replicative trophozoite to a dormant and resistant cyst Some FLA can be pathogenic to humans such as *Acanthamoeba Balamuthia Naegleria* and *Sappinia* causing rare but fatal infection in humans FLA are also known to be carriers of pathogenic microorganisms but few information is currently available on the natural bacteria of FLA and how various bacteria avoid phagocytosis predation by these specific types of amoebae There is an imperious need to draw more attention to this group of microorganisms and for this we seek submissions that address advancements in the biology and pathogenesis of FLAs **Host-Parasite Cellular and Molecular Interactions in Protozoal Infections** K.-P. Chang, David

Snary, 2013-06-29 Tropical diseases such as leishmaniasis malaria trypanosomiasis toxoplasmosis and amebiasis continue to plague the world resulting in considerable morbidity and mortality especially in the third world countries These diseases are caused by a group of protozoa which have over the years undergone evolutionary adaptation to live often intracellularly in a parasitic way of life So well adapted have they become that they recognize the right hosts or cells to parasitize yet at the same time they escape recognition and destruction by the host immune system The mechanisms of such recognition and the escape of recognition are governed largely by host parasite surface membrane interactions at the cellular and molecular level Unique molecules produced by unusual pathways of these parasites have also been discovered and found to play important roles in their survival in the host Understanding these mechanisms and pathways is essential not only to formulate a rational strategy for chemo and immuno prophylaxis and therapy but also to unravel the mystery of biological evolution in symbiosis and parasitism In the advent of our knowledge on the molecular biology and biochemistry of parasite membrane and other molecules it is opportune to examine and discuss their possible roles in host parasite recognition and interaction in a comparative approach To highlight the recent advances of this area in various host parasite systems a NATO advanced Research Workshop was held from September 27 to October 1 1986 at Hotel Villa del Mare Acquafredda di Maratea Italy
