*The Handbook of Psycholinguistic and Cognitive Processes* Jackie Guendouzi, Filip Loncke, Mandy J. Williams, 2011-01-07. This handbook includes an overview of those areas of cognition and language processing that are relevant to the field of communication disorders and provides examples of theoretical approaches to problems and issues in communication disorders. The first section includes a collection of chapters that outline some of the basic considerations and areas of cognition and language that underlie communication processing. A second section explains and exemplifies some of the influential theories of psycholinguistic cognitive processing and the third section illustrates theoretical applications to clinical populations. There is coverage of theories that have been either seminal or controversial in the research of communication disorders. Given the increasing multi-cultural workload of many practitioners working with clinical populations, chapters relating to bilingual populations are also included. The volume book provides a single interdisciplinary source where researchers and students can access information on psycholinguistic and cognitive processing theories relevant to clinical populations. A range of theories, models and perspectives are provided. The range of topics and issues illustrate the relevance of a dynamic interaction between theoretical and applied work and retains the complexity of psycholinguistic and cognitive theory for readers both researchers and graduate students whose primary interest is the field of communication disorders.

*Cognitive Biases in Anxiety and Depression* Paula Hertel, 2002. This special issue of *Cognition and Emotion* is dedicated to the phenomena of emotion-related biases in attention and remembering that are experienced by anxious and depressed people. Andrew Mathews and Colin MacLeod summarize their new research in using experimental methods to train anxiety-like biases in attention and interpretation. Elaine Fox, Riccardo Russo and Kevin Dutton report new experiments concerning delayed disengagement from threatening events in anxiety. Phil Watkins's article addresses the conditions for obtaining depression-related biases on indirect tests of memory. Depression-consistent biases in false recognition are reported by Rich Wenzlaff, Jo Meier and Danette Salas; these biases also characterized performance by

previously dysphoric students and suggest indirect measures of vulnerability to depression Prospective evidence that cognitive biases index vulnerability is described by Stephanie Rude and her colleagues In short the special issue contains a mixture of new findings with integrative review and suggestions for future directions in investigations of emotionally disordered cognition

Young, 1996 An extended version of the first edition this book includes a set of research review papers which supplement the contents of each chapter by providing a discussion of current research issues and detailed investigations of individual cases
