## The Facts

## What should I know about pathology test results?

Pathology test results influence about 70% of healthcare decisions and patients have the right to know what tests have been requested, and to have their results explained to them. Here is a snapshot of different elements of the pathology test results process, including some points to consider.

### Did you know?

A 'normal' pathology test result for one person might be an 'abnormal' result for another. Resources to explore this concept further include a series of brochures produced by the Royal College of Pathologists of Australasia (RCPA) ([www.rcpa.edu.au/Publications/Educational/dayinlife.html](http://www.rcpa.edu.au/Publications/Educational/dayinlife.html)) and Lab Tests Online ([www.labtestsonline.org.au](http://www.labtestsonline.org.au)).

### Interpreting pathology test results

The treating practitioner is the most appropriate and qualified person to explain and discuss pathology test results. This is because tests represent just one of the many factors that are considered in reaching a diagnosis and planning treatment. Other factors may include:

- age and gender
- current condition and physical findings
- medical, family and social history
- medications
- other diagnostic procedures
- occupation
- ethnicity
- diet.

### Can I talk directly to a pathologist about my pathology test results?

While there is no formal restriction on directly contacting a pathologist, the most appropriate person to discuss pathology test results is the treating practitioner. This is because pathology test results must be interpreted in the context of other factors which may not be known to

the pathologist, such as complete information to interpret the test result including history and physical examination.

### Can I have a copy of my pathology test results?

Yes. Patients are legally entitled to a copy of their pathology test results although the treating practitioner is in the best position to understand and interpret the test results and its potential impact for their patient. If patients would like a copy of their test results, they should be requested from the treating practitioner at the time of consultation, or directly from the relevant pathology laboratory.

Each pathology laboratory will have their own protocol on how to release pathology test results to patients, and they may inform the treating practitioner of this request. This is because reading their own pathology test results may be distressing or potentially confusing for some people. Pathology test results are also reported using technical medical language and may be difficult for most patients to interpret or understand.
