The Geographic Pathology of Atherosclerosis Henry C.

McGill,1968 Overview Public trust in corporations plummeted in the wake of the 2008 financial crisis when Lehman Brothers and General Motors became dirty words for many Americans In Corporate Dreams James Hoopes argues that Americans still place too much faith in corporations and especially in the idea of values based leadership favored by most CEOs The danger of corporations he suggests lies not just in their economic power but also in how their confused and undemocratic values are infecting Americans visions of good governance Corporate Dreams proposes that Americans need to radically rethink their relationships with big business and the government Rather than buying into the corporate notion of values based leadership we should view corporate leaders with the same healthy suspicion that our democratic political tradition teaches us to view our political leaders Unfortunately the trend is moving the other way Corporate notions of leadership are invading our democratic political culture when it should be the reverse To diagnose the cause and find a cure for our toxic attachment to corporate models of leadership Hoopes goes back to the root of the problem offering a comprehensive history of corporate culture in America from the Great Depression to today s Great Recession Combining a historian s careful eye with an insider s perspective on the business world this provocative volume tracks changes in government economic policy changes in public attitudes toward big business and changes in how corporate executives view themselves Whether examining the rise of Leadership Development programs or recounting JFK s Pyrrhic victory over U S Steel Hoopes tells a compelling story of how America lost its way ceding authority to the policies and values of corporate culture But he also shows us how it s not too late to return to our democratic ideals and that it s not too late to restore the American dream **Pathobiology of the Human**

Atherosclerotic Plaque Seymour Glagov,William P., III Newman,Sheldon A. Schaffer,2012-12-06 Seymour Glagov The last meeting devoted exclusively to an examination of the atherosclerotic plaque took place in Chicago 25 years ago under the joint auspices of the Council on Arteriosclerosis of the American Heart Association and the Chicago Heart Association The proceedings were published subsequently in a volume entitled Evolution of the Atherosclerotic Plaque edited by Richard J Jones 1 Both experimental and human lesions were considered and several provocative new approaches to the disorder were discussed The electron microscope was being applied systematically to the study of blood vessels at that time so that details of the infrastructure and cellular composition of the artery wall and of atherosclerotic lesions were presented in some detail There was as one result of these explorations considerable discussion of morphologic evidence suggesting that the principal cell involved in the atherogenic process was neither the fibroblast nor the macrophage as had been supposed but the smooth muscle cell In particular the findings indicated that this cell could incorporate lipid and become a foam cell
