Diagnostic Imaging of the Nose and Paranasal Sinuses Glyn A.S. Lloyd, 2012-12-06 In the past two decades the radiological investigation and imaging of paranasal sinus disease has been revolutionised by the introduction of two new techniques magnetic resonance and computerised tomography These have made the diagnosis and localisation of neoplastic and non neoplastic

disease a far more exact process and they have completely replaced conventional pluridirectional tomography as a means of augmenting the initial plain radiographic examination of the paranasal sinuses. The recent introduction into clinical practice of the paramagnetic contrast agent gadolinium DTPA has extended further the range of magnetic resonance in the demonstration of naso sinus disease. The account which follows is an attempt to summarise present knowledge in this division of otorhinolaryngology imaging. The format of the chapters has been arranged in two halves: the initial nine chapters are concerned with investigative techniques and non-neoplastic disease, while the second half of the book is entirely devoted to benign and malignant tumours. The latter chapters are arranged according to the nomenclature proposed by my two ex-colleagues Professor I. Friedmann and the late Dr D. A. Osborn in their book *The Pathology of Granulomas and Neoplasms of the Nose and Paranasal Sinuses* (Churchill Livingstone, 1982).

Scadding, 2012-12-06 Until recently the contribution of immunological knowledge to the understanding and management of ENT disorders was slight being largely confined to the appreciation that many rhinitic patients were allergic Happily this situation is rapidly changing the immunological basis of many disorders of the ears nose and throat is becoming recognized and the mechanisms of the reactions involved are being elucidated From this rational therapy should evolve This book aims to highlight some of the areas in which immunological mechanisms are involved in otorhinolaryngology It is written by experts in their respective fields of immunology and allergy otology rhinology and pathology It opens with an overview of the pathways of the immune response and the cells and molecules involved leading to an appreciation of the normal defence mechanisms of the upper respiratory tract and possible areas of failure There is then a chapter on HIV infection and how this may present to otorhinolaryngologists The normal function of the tonsil and the immunological effects of tonsillectomy are then considered The varying roles of fungi in ENT disorders ranging from commensal through allergen to invasive organisms is assessed by Professor R J Hay Perhaps the most obvious immunological contribution to management thus far lies in the immunocytochemical diagnosis of pathological conditions of the ears nose and throat and this is covered in a chapter by Professor Leslie Michaels *Diagnostic Histopathology of Tumors* Christopher D. important role in enhancing international cooperation in this combined field      *Ophthalmology* Pinakin Davey, 2014-09-03
