And where is God and what is love amidst the complex evolutionary development of all cancers? In *Chance, Necessity, Love: An Evolutionary Theology of Cancer*, Hummel and Woloschak address these questions that arise for many people with cancer and in all who grapple with making meaning of science about cancers. In order to do so, the authors first clarify new scientific findings about cancer and then offer faithful and wise theological perspectives on these discoveries. In doing so, they make plain what cannot and can be changed about cancer. And in doing so, they show how cancer is an evolutionary disease that develops according to the same dynamics of chance, that is, random occurrences and necessity, law-like regularities at work in all other evolutionary phenomena. Therefore, they ask where is God and what is love within the evolutionary chance and necessity operative throughout all aspects of cancer. They offer the readers thoughtful responses to this question and many others: life, death, hope, acceptance and love given the evolutionary nature of cancer.

**Chance or Providence** Louise Hickman, 2014-11-10. Belief in some sort of providence is widespread even among those who do not profess any kind of conventional religious faith. The belief that some sort of benevolent divine force directs the events of the universe is one that has shaped our philosophical and theological convictions together with our economic and social political landscape. The 2013 conference of the Science and Religion Forum was convened to discuss some of the most pressing questions that arise from a consideration of providence: Is a belief in providence compatible with freedom? What of the suffering of non-human creatures? Should providence be thought of as general or as special intervention? How might a belief in providence be squared with the challenges raised by scientific naturalism and the theory of evolution? This book presents chapters that originated from that conference and explores a variety of responses to these critical questions. Insights from both science and theology are drawn together by some of the leading thinkers in this field. The result is a contribution to the theology of providence which will be of substantial value to all those interested in the conversation between science and religion.
