Patient Data Management In Intensive Care:

Patient Data Management in Intensive Care Kurt Lenz, Philipp G.H. Metnitz, 2012-12-06 Recent technological innovations influenced primarily by the development of more sophisticated faster and cheaper computer systems permitted also the evolution of more affordable systems for Patient Data Management so called PDM Systems The experience of the authors on one of the first PDMS installation sites in Europe shows that the purchase of such a system is not an easy task since accurate data are not available in a comparable format Therefore the first part of the book is devoted to a comparison of already installed commercially distributed bedside based PDMS with regard to their specifications functions and performance The methods included a questionnaire with detailed questions for the vendors to answer and a table of functions comparing the most important functions which should be included in a PDMS With that list the different systems which were all in clinical use were checked for the availability and the way of use of these functions To evaluate variations in the systems performance an information retrieval test was designed and executed In the second part the different vendors whose systems were included in the study were to describe the systems from their viewpoints The third part contains papers describing the users experiences The fourth and last part shows how to use PDMS data for scientific and therapeutic purposes including two papers on clinical expert systems Thus this book provides valuable information for clinicians and hospital managers who have to decide on the purchase of a Patient Data Management System

Controversies in Intensive Care Medicine Ralf Kuhlen, 2008 In recent years many clinical interventions in intensive care medicine have been based on clear scientific evidence However at least as many clinical interventions still remain the subject of controversy either due to a lack of rigorous data or due to the existence of conflicting data In this book these controversies are discussed by experts of international renown in their respective fields The goal is twofold To provide us with a balanced and unbiased presentation of the subject explaining the

different schools of thought relevant to the controversy To summarise the data with a clinically useful and valid recommendation for our practice Virtually all fields of intensive care medicine are covered in over 50 chapters dealing with controversies over treatment options in acute illness states organising and providing care for acutely ill patients as well as how to answer ethical questions arising in critical care medicine every day Systems Biology and Data-Driven Machine Learning-Based Models in Personalized Cardiovascular Medicine Miguel Hueso,Joan Carles Escolà-Gil,Noemi Rotllan Vila,Alfredo Vellido,2023-11-15 Handbook Of Intensive Care Organization And Management Andrew Webb,2016-07-28 The global trend of increasingly ageing societies and long term illnesses has meant a growth in demand for intensive care resources This book advises on leadership and organizational development of intensive care units in order to give best practices for governance performance emergency response and safety Written by international experts in the field each chapter allows researchers clinicians and service providers worldwide to be able to refer to this single reference book In seven parts the volume will tackle aspects of intensive care management in both global and local contexts and interrogate the key concerns that service providers face It works as an informative guide for the practical administration of intensive care as well as being international in its design and information Databases for Cardiology G.T. Meester,F. Pinciroli,2012-12-06 A database is in principle just a large collection of related or separate data systematically stored in a computer It should be possible for the data to be easily entered into the database structure and afterwards also easily read corrected and processed The later analysis of data from such a database is greatly enhanced by the availability of special query languages and statistical analysis programs not only for serial items but also for large combinations of data Query languages such as SQL Structured Query Language developed especially for these purposes make databases easily accessible also to researchers who may not be very well versed in computer programming The cardiologist medical clinician and researcher of today is of necessity confronted more and more with computer based data storage Interest is of course focused primarily on the clinical use of such databases more than on the technical design itself except for some very specific personalized applications For the latter approach there are at present many software packages commercially available especially designed for use in the personal computer environment This book is comprised out of a number of contributions by various authors with differing backgrounds and from many different countries The editors being a cardiologist and an information scientist have strived to achieve an equilibrium between these two fields The chapters in this book form a cross section of the many approaches to database design and implementation in the area of cardiology Organisation and Management of Intensive Care D. Reis Miranda,D.W. Ryan,Wilmar Schaufeli,V. Fidler,2012-12-06 From the viewpoint of a health economist the intensive care unit leU is a particularly fascinating phenomenon It is the epitome of high tech medicine and frequently portrayed as the place where life saving miracles are routinely wrought But the popular imagination is also caught up in the darker side when agonizing decisions have to be made to avoid futile and inhuman continuation of expen

sive treatments My analytical interests led me to approach these issues by asking what the evidence tells us about which leu activities are very bene ficial in relationship to their costs and which are not This quickly translates into a slightly different question namely which patients are most appropriately treated in an leu and which not Unfor tunately it is very hard to answer these questions because it has pro ved very difficult to investigate these issues in the manner which is now regarded as the gold standard namely by conducting rando mized clinical trials or alternative courses of action I think this is a pity and I am not at all convinced that it would be unethical to do so in many cases because there is wide variation in practice and ge nuine doubt as to which practices are best the two conditions that need to be fulfilled before such a trial is justifiable

Health Informatics Meets EHealth G. Schreier,D. Hayn,2018-05-18 Biomedical engineering and health informatics are closely related to each other and it is often difficult to tell where one ends and the other begins but ICT systems in healthcare and biomedical systems and devices are already becoming increasingly interconnected and share the common entity of data This is something which is set to become even more prevalent in future and will complete the chain and flow of information from the sensor via processing to the actuator which may be anyone or anything from a human healthcare professional to a robot Methods for automating the processing of information such as signal processing machine learning predictive analytics and decision support are increasingly important for providing actionable information and supporting personalized and preventive healthcare protocols in both biomedical and digital healthcare systems and applications This book of proceedings presents 50 papers from the 12th eHealth conference eHealth2018 held in Vienna Austria in May 2018 The theme of this year s conference is Biomedical Meets eHealth From Sensors to Decisions and the papers included here cover a wide range of topics from the field of eHealth The book will be of interest to all those working to design and implement healthcare today
