Pattern Classification Neurofuzzy Methods And Their Comparison:

Pattern Classification Shigeo Abe, 2012-12-06 Neural networks have a learning capability but analysis of a trained network is difficult. On the other hand, extraction of fuzzy rules is difficult but once they have been extracted it is relatively easy to analyze the fuzzy system. This book solves the above problems by developing new learning paradigms and architectures for neural networks and fuzzy systems. The book consists of two parts: Pattern Classification and Function Approximation. In the first part, based on the synthesis principle of the neural network classifier, a new learning paradigm is discussed and classification performance and training time of the new paradigm for several real world data sets are compared with those of the widely used back propagation algorithm. Fuzzy classifiers of different architectures based on fuzzy rules can be defined with hyperbox, polyhedral or ellipsoidal regions. The book discusses the unified approach for training these fuzzy classifiers. The performance of the newly developed fuzzy classifiers and the conventional classifiers such as nearest neighbor classifiers and support vector machines are evaluated using several real world data sets and their advantages and disadvantages are clarified. In the second part, Function approximation is discussed, extending the discussions in the first part. Performance of the function approximators is compared. This book is aimed primarily at researchers and practitioners in the field of artificial intelligence and neural networks.

Support Vector Machines for Pattern Classification Shigeo Abe, 2010-07-23 A guide on the use of SVMs in pattern classification including a rigorous performance comparison of classifiers and regressors. The book presents architectures for multiclass classification and function approximation problems as well as evaluation criteria for classifiers and regressors. Features: Clarifies the characteristics of two class SVMs. Discusses kernel methods for improving the generalization ability of neural networks and fuzzy systems. Contains ample illustrations and examples. Includes performance evaluation using publicly available data sets. Examines Mahalanobis kernels, empirical feature space and the effect of model selection by cross validation. Covers sparse SVMs, learning using privileged information, semi supervised learning, multiple classifier systems and multiple kernel learning. Explores incremental training, batch training and active set training methods and decomposition techniques for linear programming SVMs. Discusses variable selection for support vector regressors.

Computational Intelligence Christine L. Mumford, 2009-07-21 This book is about synergy in computational intelligence CI It is a collection of chapters that covers a rich and diverse variety of computer based techniques all involving some aspect of computational intelligence but each one taking a somewhat pragmatic view Many complex problems in the real world require the application of some form of what we loosely call intelligence for their solution

Few can be solved by the naive application of a single technique however good it is Authors in this collection recognize the limitations of individual paradigms and propose some practical and novel ways in which different CI techniques can be combined with each other or with more traditional computational techniques to produce powerful problem solving environments which exhibit synergy i.e. systems in which the whole is greater than the sum of the parts Computational intelligence is a relatively new term and there is some disagreement as to its precise definition Some practitioners limit its scope to schemes involving evolutionary algorithms neural networks fuzzy logic or hybrids of these For others the definition is a little more flexible and will include paradigms such as Bayesian belief networks multi agent systems case based reasoning and so on Generally the term has a similar meaning to the well known phrase Artificial Intelligence AI although CI is perceived more as a bottom up approach from which intelligent behaviour can emerge whereas AI tends to be studied from the top down

and derive from pondering upon the meaning of intelligence These and other key issues will be discussed in more detail in Chapter 1

Fundamentals of Remote Sensing George Joseph, 2005. This book presents the fundamental concepts covering various stages of remote sensing from data collection to end utilization so that it can be appreciated irrespective of the discipline in which the reader has graduated. The physical principles on which remote sensing is based have been explained without getting into complicated mathematical equations.

When Jihadi Ideology Meets Social Media Jamil Ammar, Songhua Xu, 2017-08-31. This book is designed to provide specialists, spectators, and students with a brief and engaging exploration of media usage by radical groups and the laws regulating these grey areas of Jihadi propaganda activities. The authors investigate the use of religion to advance political agendas and the legal challenges involved with balancing regulation with free speech rights. The project also examines the reasons behind the limited success of leading initiatives to curb the surge of online extreme speech such as Google's Redirect Method or the U.S. State Department's campaign called Think Again. The volume concludes by outlining a number of promising technical approaches that can potentially empower tech companies to reduce religious extremist groups' presence and impact on social media.
