T. Ng ,Ajay K. Dalai,2020-12-29 Catalysis in the industrial production of chemicals fuels and materials accounts for more than half of gross material production worldwide Heterogeneous catalysis enables fast and selective chemical transformations resulting in superior product yield and facilitating catalyst separation and recovery The synthesis of novel catalysts has emerged as a hot topic for process and product development with numerous research publications and patents

Hence development of efficient catalysts and their applications is important for sustainable energy production and use green chemicals production and use and economic growth This Special Issue discusses recent developments related to catalysis for the production of sustainable fuels and chemicals and traverses many new frontiers of catalysis including synthesis characterization catalytic performances reaction kinetics and modelling as well as applications of catalysts for the production of biofuels synthesis gas and other green products This covers the current state of the art catalysis research applied to bioenergy organic transformation carbon carbon and carbon heteroatoms reforming hydrogenation hydrodesulfurization hydrodenitrogenation hydrodemetalization Fischer Tropsch synthesis to name a few This book highlights new avenues in catalysis including catalyst preparation methods analytical tools for catalyst characterization and techno economic assessment to enhance a chemical or biological transformation process using catalysts for a betterment of industry academia and society

**Emissions Control Catalysis** Ioannis V. Yentekakis,Philippe Vernoux,2020-06-18 The important advances achieved over the past years in all technological directions industry energy and health contributing to human well being are unfortunately in many cases accompanied by a threat to the environment with photochemical smog stratospheric ozone depletion acid rain global warming and finally climate change being the most well known major issues These are the results of a variety of pollutants emitted through these human activities The indications show that we are already at a tipping point that might lead to non linear and sudden environmental change on a global scale Aiming to tackle these adverse effects in an attempt to mitigate any damage that has already occurred and to ensure that we are heading toward a cleaner green and sustainable future scientists around the world are developing tools and techniques to understand monitor protect and improve the environment Emissions control catalysis is continuously advancing providing novel multifunctional and optimally promoted using a variety of methods nano structured catalytic materials and strategies e g energy chemicals recycling cyclic economy that enable us to effectively control emissions either of mobile or stationary sources improving the quality of air outdoor and indoor and water and the energy economy Representative cases include the abatement and or recycling of CO<sub>2</sub> CO NO<sub>x</sub> N<sub>2</sub>O NH<sub>3</sub> CH<sub>4</sub> higher hydrocarbons volatile organic compounds VOCs particulate matter and specific industrial emissions e g SO<sub>x</sub> H<sub>2</sub>S dioxins aromatics and biogas The Emissions Control Catalysis Special Issue has succeeded in collecting 22 high quality contributions included in this MDPI open access book covering recent research progress in a variety of fields relevant to the above topics and or applications mainly on i NO<sub>x</sub> catalytic reduction from cars i e TWC and industry SCR emissions ii CO CH<sub>4</sub> and other hydrocarbons removal and iii CO<sub>2</sub> capture recirculation combining emissions control with added value chemicals production
