Conceptual Modeling for E-Business and the Web Stephen W. Liddle, Heinrich C. Mayr, Bernhard Thalheim, 2003-06-29 The objective of the workshops associated with the ER2000 19th International Conference on Conceptual Modeling was to give participants the opportunity to present and discuss emerging hot topics thus adding new perspectives to conceptual modeling This attracts communities which have begun to or which have already recognized the importance of conceptual modeling for solving their problems To meet this objective we selected the following two topics Conceptual Modeling Approaches for E Business eCOMO2000 aimed at studying the application of conceptual modeling techniques speci cally to e business The World Wide Web and Conceptual Modeling WCM2000 which analyzes how

conceptual modeling can help address the challenges of Web development management and use eCOMO2000 is the first international workshop on Conceptual Modeling approaches for E Business. It was intended to work out and to discuss the actual state of research on conceptual modeling aspects and methods within the realm of the network economy which is driven by both traditionally organized enterprises and dynamic networks. Following the philosophy of the ER workshops, the selection of eCOMO contributions was done very carefully and restrictively: six accepted papers out of thirteen submissions in order to guarantee an excellent workshop program. IT Infrastructure and Management (For the GBTU and MMTU) , Integrated Management from E-Business Perspective Pradeep Kumar Ray, 2012-12-06. E Business covers a broad spectrum of businesses based on the Internet including e commerce, e healthcare, e government and e tailing. While substantial attention is being given to the planning and development of e business applications, the efficiency and effectiveness of e business systems will largely depend on management solutions. These management solutions demand a good grasp of both the technical and business perspectives of an e business service. There have been many books on the Internet based on e commerce, Internet protocols, distributed components, etc. However, none of these books address the problem of managing e business as a set of networked services. They do not link enterprise management with network and systems management. This book provides an overview of the emerging techniques for IT service management from a business perspective with case studies from telecommunication and healthcare sectors. It integrates the business perspective with relevant technical standards such as SNMP, WBEM and DMI. This book presents some concepts and methodologies that enable the development of effective and efficient management systems for networked services. The book is intended to familiarize practicing managers, engineers and graduate level students with networked service management concepts, architectures and methodologies with reference to evolving standards. It should be useful in a number of disciplines such as business management, information systems, computers and networking and telecommunications. Appendix 2 is based on TeleManagement TM Forum's documents on TOM GB921, GB910 and GB908. While this appendix has explained the basic management concept of an e telco, TMForum now recommends the use of eTOM as explained in www.tmforum.com. An overview of eTOM is available in the report 'The TeleManagement Forum's enhanced Telecom Operations Map eTOM' by Michael Kelly appearing in the Journal of Network and Systems Management in March 2003.
