*The Naked Emperor* Antony Latham,2005 This thought provoking book fundamentally questions the foundations of Darwinism which has become widely accepted as fact through detailed biological arguments and the use of the author s own intricate knowledge of anatomy Challenging the suggestion that the flora and fauna of the world came about through a series of unlikely mutations the author makes many careful distinctions such as differentiating between micro and macro evolution and the characteristics of DNA

expanded awareness so profound they can feel the interconnectedness of all life These trance like moments of clarity unity and wonder often incite a call to protect and preserve the earth to support Nature as she supports us Termed nature mysticism people from all cultures have described such experiences However the ever increasing urbanization of the world s population is threatening this ancient connection as well as the earth itself In Ecomysticism Carl von Essen explores nature mysticism through the recorded experiences of outdoor enthusiasts as well as scientific studies in biology psychology and neuroscience Citing consciousness scholar William James and a variety of well known nature lovers such as Ansel Adams Henry David Thoreau and Ralph Waldo Emerson von Essen shows how the spiritual transcendence from an encounter in nature like other mystical experiences is healing the Nature Deficit Disorder of our psyches and bodies leading to an expansion of our worldview and a clearer understanding of our self and of our natural world Offering a solid bridge between spiritual practice and environmental activism von Essen s spiritual ecology reveals how only through a renewal of humanity s spiritual connection to nature can we effect true environmental healing

**The First Human** Ann Gibbons, 2007-04-10 In this dynamic account award winning science writer Ann Gibbons chronicles an extraordinary quest to answer the most primal of questions When and where was the dawn of humankind Following four intensely competitive international teams of scientists in a heated race to find the missing link the fossil of the earliest human ancestor Gibbons ventures to Africa where she encounters a fascinating array of fossil hunters Tim White the irreverent Californian who discovered the partial skeleton of a primate that lived 4 4 million years ago in Ethiopia French paleontologist Michel Brunet who uncovers a skull in Chad that could date the beginnings of humankind to seven million years ago and two other groups one led by zoologist Meave Leakey the other by British geologist Martin Pickford and his French paleontologist partner Brigitte Senut who enter the race with landmark discoveries of their own Through scrupulous research and vivid first person reporting *The First Human* reveals the perils and

the promises of fossil hunting on a grand competitive scale      Spine of the Continent Mary Ellen Hannibal, 2013-08-06 As climate change encroaches natural habitats are shifting while human development makes islands of even the largest nature reserves stranding the biodiversity within them The Spine of the Continent profiles the most ambitious conservation effort ever made to create linked protected areas from the Yukon to Mexico Backed by blue ribbon scientific foundations the Spine is a grassroots cooperative effort among NGOs large and small and everyday citizens It aims not only to make physical connections so nature will persist but also to make connections between people and the land In this fascinating and important account Mary Ellen Hannibal travels the length of the Spine and shares stories of the impassioned activists she meets and the critters they love      *Encyclopedia of Anthropology* H. Garrett, 2012-03-30 A balanced accessible discussion of whether and on what grounds animal research can be ethically justified An estimated 100 million nonhuman vertebrates worldwide including primates dogs cats rabbits hamsters birds rats and mice are bred captured or otherwise acquired every year for research purposes Much of this research is seriously detrimental to the welfare of these animals causing pain distress injury or death This book explores the ethical controversies that have arisen over animal research examining closely the complex scientific philosophical moral and legal issues involved Defenders of animal research face a twofold challenge they must make a compelling case for the unique benefits offered by animal research and they must provide a rationale for why these benefits justify treating animal subjects in ways that would be unacceptable for human subjects This challenge is at the heart of the book Some contributors argue that it can be met fairly easily others argue that it can never be met still others argue that it can sometimes be met although not necessarily easily Their essays consider how moral theory can be brought to bear on the practical ethical questions raised by animal research examine the new challenges raised by the emerging possibilities of biotechnology and consider how to achieve a more productive dialogue on this polarizing subject The book's careful blending of theoretical and practical considerations and its balanced arguments make it valuable for instructors as well as for scholars and practitioners      **Biological Perspectives**, 2002-07-31      Aliens Like Us? Anthony Aveni, 2025-03-18 In this authoritative accessible and at times funny and irreverent work distinguished anthropologist Anthony Aveni speaks to the trained astrophysicist and the curious layperson alike about a simple but previously unexplored question Why do we assume aliens if they are really out there behave just like us Aveni's newest work departs from the usual scientific treatment of extraterrestrial intelligence by probing the historical and widely neglected anthropological record which offers relevant analogous incidents of contact among terrestrial cultures Beginning with theories of the evolution of life and culture advocated by astrobiologists *Aliens Like Us* explores how the Western cultural imagination is influenced by ways of knowing that are deeply embedded in the minds of

the questioners for example how we consider the ownership of property the idea of progress and even the way we classify things The lessons of anthropology offer not only value structures from other cultures that differ profoundly from our own but also testify to the diverse ways in which alien cultures interact Finally on the question of potential first contact Aveni closes with a fascinating exploration of the image of extraterrestrials in popular culture that is derived in part from the hugely influential realm of science fiction

**The Evolution of Adaptive Systems** James Patrick Brock,2000-07-12 The data of evolutionary biology have changed in a very radical way in recent years the most significant input to this revolution being the advances made in developmental genetics Another recent development is a noticeable shift away from extreme specialization in evolutionary biology In this we are perhaps to be reminded of George Gaylord Simpson s comments evolution is an incredibly complex but at the same time integrated and unitary process The main objective of this book is to illustrate how natural adaptive systems evolve as a unity with the particular objective of identifying and merging several special theories of evolution within the framework of a single general theory The Evolution of Adaptive Systems provides an interdisciplinary overview of the general theory of evolution from the standpoint of the dynamic behavior of natural adaptive systems The approach leads to a radically new fusion of the diverse disciplines of evolutionary biology serving to resolve the considerable degree of conflict existing between different schools of contemporary thought The book is a timely volume written by a natural historian with a broad view of biology The author draws examples from a large range of organisms from many different habitats and niches where interesting adaptations have evolved Probes deeply into mechanisms of evolution such as developmental genetics morphogenesis chromosome structure and cladogenesis Clear definition of terms with illustrations visualizing the main theoretical structures and point by point summaries clearly stating the principal conclusions
