Patterns In Time:

Individual Development and Social Change John R. Nesselroade, Alexander Von Eye, 2013-09-24 Individual Development and Social Change Explanatory Analysis represents a convergence of three lines of emphasis now visible in developmental research and theory building The three are 1 the life course as a focus for the study of development and social change and their interrelationships 2 the life span orientation to the study of individual development with its acknowledgment of the salience of contextual features for understanding development and 3 the growth of methodological innovations that provide more appropriate and powerful ways of exploiting data gathered to describe and explain developmental change processes The book opens with a study on how major cultural change originates and unfolds over time This is followed by separate chapters on the use of sequential designs for explanatory analyses evolutionary aspects of social and individual development the concepts of the theory of causal and weak causal regressive dependence and the concepts of age period and cohort from the perspective of developmental psychology Subsequent chapters examine development and aging as lifelong processes of historical populations the methodological integration of natural and cultural science perspectives in developmental psychology and application of the multifaceted methodology to the mutuality of constraint between sociocultural group and individual dynamics Factory ,1910 Vols 24 no 3 v 34 no 3 include International industrial digest
