Sprott,2002-12-30 A comprehensive case study portrait of the childrearing context of a predominantly Eskimo village in the remote Northwest Arctic designed to look for evidence of reinvention transformation or conscious choice as process features of change in the mix of traditional childrearing beliefs and practices with infusions from the dominant culture The rearing

environment and child well being were studied during 18 months of anthropological fieldwork in an Alaskan Inupiaq village in the Northwest Arctic. Volunteers for the sample consisted of 44 adults from 16 extended families who were raising a child between the ages of three and six years. Results from guided interviews, card sorts, standardized family and home assessments, and review of the children's medical records revealed a complex portrait of culture continuity and change and included the following trends: many traditions had been retained even though villagers perceived few differences in their rearing style compared to that of mainstream culture; despite the presence of other households with extended family members in the village and touting of the value of kinship, 25% of core families reared their children in relative isolation; growth measurements, immunization status, and general health of the children were good, but children evidenced diets high in sugar and many suffered severe dental problems; present day caregivers were engaged in dialogue about problem parenting behaviors that had developed a generation earlier during a time of massive acculturation stress and population growth, namely the overuse of scolding of children without attached explanations and overt favoring of specific children over others in the family. The study presents present day rearing strategies and ideas as summarized from interviews and data from more formal instruments and frames changes in the system within the broader historical social context.

So what can you do during the first five years to ensure that your child is primed to excel? The good news is that raising a smarter child is easier than you think. It doesn't require making an investment in expensive equipment or high-priced tutors. It's as simple as playing the right games, serving the right foods, and maintaining a brain-enhancing environment in your home by eliminating common household toxins. In *Raise a Smarter Child by Kindergarten* by Dr. David Perlmutter, you'll learn easy and highly effective strategies that can vastly improve your child's brain power and reduce his or her chances of developing ADD and ADHD.
