Computer-Aided Architectural Design. INTERCONNECTIONS: Co-computing Beyond Boundaries Michela Turrin, Charalampos Andriotis, Azarakhsh Rafiee, 2023-07-04 This book includes the refereed Selected Papers of the 20th International Conference on Computer Aided Architectural Design INTERCONNECTIONS Co computing Beyond Boundaries CAAD Futures 2023 held in Delft The Netherlands in July 5 7 2023 The 43 full papers included in this book were carefully reviewed and selected from 144 submissions They were organized in topical sections as follows algorithmic architectural design AI powered architectural ideation performance based design urban models and analysis urban design digital design materials and fabrication spatial information data and semantics building data analysis visualisation interaction and building massing and layouts

Rank and Pseudo-Rank Procedures for Independent Observations in Factorial Designs Edgar Brunner, Arne C. Bathke, Frank Konietzschke, 2019-07-15 This book explains how to analyze independent data from factorial designs without having to make restrictive assumptions such as normality of the data or equal variances The general approach also allows for ordinal and even dichotomous data The underlying effect size is the nonparametric relative effect which has a simple and intuitive probability interpretation The data analysis is presented as comprehensively as possible including appropriate descriptive statistics which follow a nonparametric paradigm as well as corresponding inferential methods using hypothesis tests and confidence intervals based on pseudo ranks Offering clear explanations an overview of the modern rank and pseudo rank based inference methodology and numerous illustrations with real data examples as well as the necessary R SAS code to run the statistical analyses this book is a valuable resource for statisticians and practitioners alike

Advances in Product Design Engineering Panagiotis Kyratsis, Nikolaos Efkolidis, J. Paulo Davim, 2022-04-15 This book focus on the product design process It follows a holistic approach covering conceptual design design methodologies sustainability manufacturing product analysis materials design and manufacturing technologies The reader can find interesting cases about industrial design 3D printing and 4D printing for wearables The axiomatic design methodology is presented together with applications in machine learning and knowledge based systems Research about personalized fashion and professional uniform evaluations methods are included Finally the digital transformation aesthetic design and the use of materials in orthopedic design is present

Design for Excellence Sangarappillai Sivaloganathan, P. T. J. Andrews, 2005-02-18 Design for Excellence contains papers from a conference organised by Brunel University. This book will be useful for designers, engineers, software developers and other technologists working in a wide variety of engineering applications. Both those working in industry and in the academic environment will want to have access to this valuable resource. CONTENTS INCLUDE: A strategic overview of UK product development; Technology management: a methodology towards achieving design excellence within the pharmaceutical industry; Designing safer systems: the application of human factors methods; From environmental assessment results to DFE product changes: an evaluation of quantitative and qualitative methods; Design determines 70 percent of cost: A review of implications for design evaluation; Using correlation chains to link customer requirements and physical laws; How to manage 3 GEN products and services; Strain based shallow shell finite element for circular cylindrical shells; Validation of manufacturing facilities in the pharmaceuticals industry; The use of formal design techniques in the development of a model device; Aesthetic intelligence: optimizing user centred design; Tendering for engineering contracts; An investigation on specifications; component source information areas and contents.

AI-Based Optimized Design of Structural Frames Won-Keel Hong, 2024-10-16 This book introduces an auto design based optimization for building frames using an artificial neural network (ANN) based Lagrange method and novel genetic algorithm (GA). The work of great mathematician Joseph Louis Lagrange and ANNs are merged to identify parameters that optimize structural frames of reinforced concrete prestressed concrete and steel frames subject to one or more design constraints. New features for enhancing conventional GA are also demonstrated to optimize structural frames. New features for optimizing multiple design targets of the building frames are highlighted while design requirements imposed by codes are automatically satisfied. Chapters provide readers with an understanding of how both ANN based and novel GA based structural optimization can be implemented in holistically optimizing designated design targets for building structural frames, guiding readers toward more rational designs that is consistent with American Institute of Steel Construction (AISC) and American Concrete Institute (ACI) standards. ANN based holistic designs of multi-story frames in general and reinforced concrete prestressed concrete and steel frames in particular are introduced. This book suits structural engineers, architects and graduate students in the field of building frame designs and is heavily illustrated with color figures and tables.
