Rapid Manufacturing An Industrial Revolution For The Digital Age:

Rapid Manufacturing Neil Hopkinson, Richard Hague, Philip Dickens, 2006-02-22 Rapid Manufacturing is a new area of manufacturing developed from a family of technologies known as Rapid Prototyping. These processes have already had the effect of both improving products and reducing their development time; this in turn resulted in the development of the technology of Rapid Tooling which implemented Rapid Prototyping techniques to improve its own processes. Rapid Manufacturing has developed as the next stage in which the need for tooling is eliminated. It has been shown that it is economically feasible to use existing commercial Rapid Prototyping systems to manufacture series parts in quantities of up to 20 000 and customised parts in quantities of hundreds of thousands. This form of manufacturing can be incredibly cost effective and the process is far more flexible than conventional manufacturing. Rapid Manufacturing: An Industrial Revolution for the Digital Age addresses the academic fundamentals of Rapid Manufacturing as well as focussing on case studies and applications across a wide range of industry sectors. As a technology that allows manufacturers to create products without tools, it enables previously impossible geometries to be made. This book is abundant with images depicting the fantastic array of products that are now being commercially manufactured using these technologies. Includes contributions from leading researchers working at the forefront of industry. Features detailed illustrations throughout. Rapid Manufacturing: An Industrial Revolution for the Digital Age is a groundbreaking text that provides excellent coverage of this fast emerging industry. It will interest manufacturing industry practitioners in research and development, product design and materials science as well as having a theoretical appeal to researchers and post graduate students in manufacturing engineering, product design, CAD, CAM and CIM. *Virtual and Rapid Manufacturing* Paulo Jorge da Silva, Bartolo, Mateus, Artur Jorge, Fernando da Conceicao Batista, Henrique Amorim Almeida, Joao Manuel Matias, Joel Correia Vasco, Jorge Brites Gaspar, Mario Antonio Correia, Nuno Carpinteiro, Andre, Nuno Fernandes Alves, Paulo Parente Novo, Pedro Goncalves Martinho, Rui Adriano Carvalho, 2007-09-17 Collection of 120 peer reviewed papers that were presented at the 3rd International Conference on Advanced Research in Virtual and Rapid Prototyping held in Leiria, Portugal, in September 2007. Law, Regulation and Governance in the Information Society Maurizio Borghi,Roger Brownsword,2022-12-30 This edited collection seeks to map the landscape of contemporary informational interests to evaluate a range of recognised and putative rights and wrongs associated with modern information societies and to consider how law regulation and governance should be deployed in response New technologies and new applications constantly disrupt our values our framing of our world and our sense of where we are and who we are In our information societies we entertain mixed hopes and expectations as well as significant fears and concerns At the root of these there are a number of informational interests on the basis of which certain rights are claimed and particular wrongs denounced This book addresses these interests considering them as relating primarily to the integrity of the informational ecosystem to the accessibility accuracy and authenticity of public information and to our individual ability to control the outward and inward flows of information that relates directly to ourselves Covering a wide range of subjects the book s interrogation of our contemporary information society is oriented around two questions first whether the information society in which we live is the kind of society that we think it should be and second if not what we can reasonably expect law regulation and governance to do in providing the basis for improving it This book will be of considerable interest to those working at the intersection of law and technology as well as others concerned with the legal political and social aspects of our information society

Additive Manufacturing, Second Edition Amit Bandyopadhyay,Susmita Bose,2019-10-16 The field of additive manufacturing is growing dynamically as the interest is persisting from manufacturing sector including other sectors as well Conceptually additive manufacturing is a way to build parts without using any part specific tooling or dies from the computer aided design CAD file of the part Second edition of Additive Manufacturing highlights the latest advancements in the field taking an application oriented approach It includes new material on traditional polymer based rapid prototyping technologies additive manufacturing of metals and alloys including related design issues Each chapter comes with suggested reading questions for

instructors and PowerPoint slides Additive Manufacturing Steinar Westhrin Killi, 2017-09-07 Additive manufacturing has matured from rapid prototyping through the now popular and maker oriented 3D printing recently commercialized and marketed. The terms describing this technology have changed over time from rapid prototyping to rapid manufacturing to additive manufacturing which reflects largely a focus on technology. This book discusses the uptake, use, and impact of the additive manufacturing and digital fabrication technology. It augments technical and business oriented trends with those in product design and design studies. It includes a mix of disciplinary and transdisciplinary trends and is rich in case and design material. The chapters cover a range of design centered views on additive manufacturing that are rarely addressed in the main conferences and publications which are still mostly and importantly concerned with tools, technologies, and technical development. The chapters also reflect dialogues about transdisciplinarity and the inclusion of domains such as business and aesthetics, narrative, and technology critique. This is a great textbook for graduate students of design, engineering, computer science, marketing, and technology, and also for those who are not students but are curious about and interested in what 3D printing really can be used for in the near future.
