Rapid Prototyping Directory 1994:

Rapid Prototyping: Principles And Applications In Manufacturing (With Cd-rom) Chee Kai Chua, Kah Fai Leong, 2000-11-22 This book provides an introduction to the fundamental theories and applications of Rapid Prototyping and traces its fascinating development in the arena of advanced manufacturing technologies. It also focuses on important issues such as the problems with the de facto STL format, application areas and industrial Case Studies. The companion CD ROM demonstrates animation images of major techniques such as stereolithography, Laminated Object Manufacturing, Solid Ground Curing, Selective Laser Sintering and Fused Deposition Modeling. This book is ideal for postgraduate final or senior year undergraduate students in mechanical and production engineering. It will be a useful text on topics of discussion such as CAD/CAM, Machine Tool Technologies and Industrial Design. Practitioners and Researchers would also find the book useful.

European Electronics Directory 1994 C.G. Wedgwood, 2013-10-22 Companion volume to Components and Sub Assemblies Directory providing access to 8000 manufacturers, agents and representatives of electronics systems and equipment. Entries include names of key managers, addresses, fax, telephone numbers and pocket descriptions of manufacturing and sales programmes. There is also a product index to track the companies involved in any given business lines.

Integrated Product, Process and Enterprise Design Ben Wang, 2012-12-06 The need exists in the private sector and government manufacturing sites to reduce product development time, production lead times, inventory and non-value added activities. At the same time, there is increased pressure to improve manufacturing process yields, production efficiency and resource utilization. Much of the technology required to meet these needs already exists, but an integrated structure that can demonstrate the potential for the technology in a concurrent engineering context does not. This book provides a road map for building the integrated technology environment to evaluate existing products, manufacturing processes and system design tools. This book details innovative approaches that will significantly improve design, manufacturing, technology development and deployment capabilities for civilian and defense applications. These approaches are integrated product, process and system design IPPSD initiatives which will greatly enhance the manufacturing competitiveness of the economy. These approaches involve the use of simulation, modeling tools and computerized virtual workstations in conjunction with a design environment which allows a diverse group of researchers, manufacturers and suppliers to work within a comprehensive network of shared knowledge. The IPPSD infrastructure consists of virtual workstations, servers and a suite of simulation, quantitative computational, analytical, experimental and qualitative tools. Such an IPPSD infrastructure will permit effective and efficient predictions of complete product design, manufacturing process design and customer satisfaction.

The Transition to Agile Manufacturing Joseph C. Montgomery, Lawrence O. Levine, 1996 Staying competitive in today's manufacturing climate keeps

getting tougher and often middle to upper managers are told to do more with less Manufacturers must be able to develop and produce customized products rapidly to meet ever changing customer needs In *The Transition to Agile Manufacturing* experts from Battelle Pacific Northwest National Laboratories describe how manufacturing companies can quickly mobilize their resources to gain a competitive edge Discover how agile manufacturing can rapidly develop new products and produce fast and flexible responses to customer needs Practical tips on organizational alignment and agility are offered in down to earth terms Beneficial for all organizations this low cost approach to agile manufacturing is especially helpful for small to mid sized manufacturers with limited resources The authors of *The Transition to Agile Manufacturing* have built for small manufacturers a road map into the world of agile manufacturing a world that will define manufacturing and the competitive environment of the future Kevin Carr Director Manufacturing Extension Partnership National Institute of Standards and Technology

Laser-Induced Materials and Processes for Rapid Prototyping Li Lü, J. Fuh, Yoke-San Wong, 2013-11-27 The term rapid prototyping RP refers to a

generic group of emerging technologies that enable very quick fabrication of engineering components primarily targeted for prototyping applications With RP very complex three dimensional parts or prototypes can be fabricated without the need of costly tooling and machining This inevitably leads to much shorter design cycle time and lower cost of building a prototype Its manifold benefits include significant productivity gains cost saving and shortened development time to introduce concept models As such RP technologies have attracted tremendous R D interests from both academia and industry in the past decade Many different processes and materials have been commercialized and used in industry primarily for the fabrication of physical prototypes More recent interests in RP technologies are towards functional applications of the fabricated parts such as in rapid tooling applications and replacements of damaged components Many processes and materials have been commercialized but are yet to be able to fulfill the aforementioned functional requirements because of limited mechanical strengths of the fabricated parts
