Rapid Thermal Processing For Future Semiconductor Devices:

Rapid Thermal Processing for Future Semiconductor Devices H. Fukuda, 2003-04-02 This volume is a collection of papers which were presented at the 2001 International Conference on Rapid Thermal Processing RTP 2001 held at Ise Shima Mie on November 14-16, 2001. This symposium is the second conference following the previous successful first International RTP conference held at Hokkaido in 1997. The RTP 2001 covered the latest developments in RTP and other short time processing technologies continuously aiming to point out the future direction in the Silicon ULSI devices and II-VI/III-V compound semiconductor devices. This book covers the following areas: advanced MOS gate stack integration technologies, advanced channel engineering including shallow junction, SiGe heterostructure, novel metallization, interconnect, silicidation, low k materials, thin dielectrics including gate dielectrics and high k materials, thin film deposition including SiGe SOI and SiC process, and device modelling. Laser assisted crystallization and TFT device fabrication technologies, temperature monitoring and slip free technologies.

Rapid Thermal Processing and beyond: Applications in Semiconductor Processing Wielfried Lerch, Jürgen Niess, 2008-03-24 Special topic volume with invited papers only. *Advances in Rapid Thermal and Integrated Processing* F. Roozeboom, 2013-03-09 Rapid thermal and integrated processing is an emerging single wafer technology in ULSI semiconductor manufacturing, electrical engineering, applied physics, and materials science. Here the physics and engineering of this technology are discussed at the graduate level. Three interrelated areas are covered: First, the thermophysics of photon induced annealing of semiconductor and related materials including fundamental pyrometry and emissivity issues; the modelling of reactor designs and processes and their relation to temperature uniformity; Second, process integration treating the advances in basic equipment design, scale up, integrated cluster tool equipment including wafer cleaning and integrated processing; Third, the deposition and processing of thin epitaxial dielectric and metal films covering selective deposition and epitaxy, integrated processing of layer stacks, and new areas of potential application such as the processing of III-V

semiconductor structures and thin film head processing for high density magnetic data storage. **Coating Materials** Akarsh Verma, Sushanta K. Sethi, Shigenobu Ogata, 2023-07-12 This book comprehensively reviews assorted types of coatings, their applications, and various strategies employed by several scientists and researchers to fabricate them. Exclusively the recent progress in computational strategies that are helpful to optimize the best suitable coating formulation before one goes for the real time fabrication has been discussed in detail. And this book is also intended to shed light on the computational modeling techniques that are used in the characterization of various coating materials. It covers mechanisms, salient features, formulations, important aspects, and case studies of coatings utilized for various applications. The latest research in this area as well as possible avenues of future research is also highlighted to encourage the researchers. **Thin-Film Transistors**
