Study of Nonequilibrium Flows V.V. Aristov, 2012-12-06 This book is concerned with the methods of solving the nonlinear Boltzmann equation and of investigating its possibilities for describing some aerodynamic and physical problems This monograph is a sequel to the book Numerical direct solutions of the kinetic Boltzmann equation in Russian which was written with F G Tcheremissine and published by the Computing Center of the Russian Academy of Sciences some years ago The main purposes of these two books are almost similar namely the study of nonequilibrium gas flows on the basis of direct integration of the kinetic equations Nevertheless there are some new aspects in the way this topic is treated in the present monograph In particular attention is paid to the advantages of the Boltzmann equation as a tool for considering nonequilibrium nonlinear processes New fields of application of the Boltzmann equation are also described Solutions of some problems are obtained with higher accuracy Numerical procedures such as parallel computing are investigated for the first time The structure and the contents of the present book have some common features with the monograph mentioned above although there are new issues concerning the mathematical apparatus developed so that the Boltzmann equation can be applied for new physical problems Because of this some chapters have been rewritten and checked again and some new chapters have been added *Viscous Flow Past a Rotating Translating Blade with Arbitrary Velocity Suction and Slip (U)* K. J. Touryan, 1963 SC-RR, 1963 *NBS Special Publication*, 1968 **Topics in Current Aerosol Research** G. M. Hidy, J. R. Brock, 2013-10-22 Topics in Current Aerosol Research deals with the fundamental aspects of aerosol science with emphasis on experiment and theory describing highly dispersed aerosols HDAs as well as the dynamics of charged suspensions Topics covered range from the basic properties of HDAs to their formation and methods of generation sources of electric charges interactions between fluid and aerosol particles and one dimensional motion of charged cloud of particles This volume is comprised of 13 chapters and begins with an introduction to the basic properties of HDAs followed by a discussion on the formation of condensation HDAs Some of the methods of generation of HDAs are considered including atomization physical condensation of vapor and chemical reactions in the gas phase are considered A transport model for electrically charged aerosols is described Subsequent chapters explore methods of investigation of HDAs in suspended state and based on particle precipitation transfer processes in HDAs including mass transfer charge transfer momentum transfer and heat transfer and charging of particulate matter by collection This book will be a useful resource for practicing scientists and graduate students in such widely diverse fields as physics physical chemistry meteorology geophysics astronomy chemical engineering mechanical engineering aerospace engineering environmental sciences and medicine The Publishers' Trade List Annual, 1985 **Hyperbolic Problems: Theory, Numerics, Applications - Proceedings Of The Fifth International Conference** James Glimm, M J Graham, J W Grove, Bradley J Plohr, 1996-03-14 The intellectual center of this proceedings volume is the subject of conservation laws Conservation laws are the most basic model of many continuum processes and for this reason they govern the motion of fluids solids and plasma They are basic to the understanding of more

complex modeling issues such as multiphase flow chemically reacting flow and non equilibrium thermodynamics Equations of this type also arise in novel and unexpected areas such as the pattern recognition and image processing problem of edge enhancement and detection The articles in this volume address the entire range of the study of conservation laws including the fundamental mathematical theory familiar and novel applications and the numerical problem of finding effective computational algorithms for the solution of these problems
