Распространенность и диагностика инородных тел в желудочно-кишечном тракте собак

С.В. Чернигова, Н.В. Зубкова[✉], А.А. Бекк*Омский государственный аграрный университет имени П.А. Столыпина, Омск, Россия*

Аннотация. Процент встречаемости инородных тел у домашних животных достаточно высок; в ряде случаев возникают осложнения, которые требуют проведения сложных реконструктивных операций, к сожалению, риск летального исхода высокий. Приведен ретроспективный анализ за 2021–2022 гг. обращений владельцев с питомцами (собаки, кошки) в ветеринарную клинику города с жалобами на наличие у животных инородных тел в пищеварительном тракте. Исследования проведены на базе ветеринарной клиники г. Омска, основывались на оценке электронной базы «Ветменеджер» и журнала для регистрации больных животных, форма № 1-вет. Полученные данные ранжированы по видовой и породной принадлежности, возрасту, сезонности и месту локализации инородного тела. Инородные тела пищеварительного тракта у животных встречались в 12% случаев от всех заболеваний желудочно-кишечного тракта. У собак заболевание регистрировали в 54% случаев, преимущественно у животных моложе одного года. По результатам исследований установлено: наиболее predisposed к проглатыванию инородных предметов породы собак: хаски (9,78%) и лабрадоры (11,9%). Локализация инородных тел регистрировалась в 45,45% случаев в тонкой кишке. Для их удаления из разных отделов пищеварительного тракта применяли соответствующее хирургические методики, из них 61% – это проведение энтеротомии. Характерными клиническими признаками кишечной непроходимости у собак являются апатичность, приступообразная или постоянная нелокализованная боль в области живота, вздутие, потеря аппетита, рвота, отсутствие дефекации, в отдельных случаях – подъем температуры, учащенное дыхание, прогрессирующее обезвоживание и нарушение мочеотделения. Для ультразвуковой картины у собак группы анализа была характерна маятникообразная перистальтика до места обструкции; визуализировались непосредственно инородные тела, гипотония желудочно-кишечного тракта. Рентгенологическое исследование показало, что у собак с инородными телами наблюдали расширенные петли кишечника, эффект «жемчужного ожерелья», тени непосредственно инородных предметов.

Ключевые слова: инородное тело, желудочно-кишечный тракт, собака, энтеротомия, кишечная непроходимость

Prevalence and diagnosis of foreign bodies in the gastrointestinal tract in dogs

S.V. Chernigova, N.V. Zubkova[✉], A.A. Bekk*Omsk State Agrarian University named after P.A. Stolypin, Omsk, Russia*

Abstract. The percentage of the spread of foreign bodies in domestic animals is quite high. In some cases complications arise that require complex reconstructive operations. Unfortunately, there remains a high risk of death. The article presents a retrospective analysis for 2021–2022 of the appeals of owners with their pets (dogs, cats) to the veterinary clinic of the city with complaints about the presence of foreign bodies in the digestive tract of animals. The research was carried out on the basis of the veterinary clinic of Omsk, based on the evaluation of the electronic database “Vetmanager” and the journal for the registration of sick animals, form No. 1-vet. The data obtained were ranked by species and breed, age, seasonality and location of the foreign body. Foreign bo-
