Rational Consensus In Science And Society:

Rational Consensus in Science and Society Keith Lehrer, C. Wagner, 2012-12-06 This book is the joint project of a philosopher Lehrer and a mathematician Wagner. The book is therefore divided into a first part written by Lehrer which is primarily philosophical and a second part written by Wagner that is primarily formal. The authors were however influenced by each other throughout. Our book articulates a theory of rational consensus in science and society. The theory is applied to politics, ethics, science, and language. We begin our exposition with an elementary mathematical model of consensus developed by Lehrer in a series of articles (1976a, 1976b, 1977, 1978). Chapter 3 contains material from 1978. Lehrer formulated the elementary model when he was a Fellow of the Center for Advanced Study in the Behavioral Sciences, Stanford, in 1973, with the invaluable mathematical assistance of Kit Fine, Gerald Kramer, and Lionel McKenzie. In the summer of 1977, Lehrer and Wagner met at the Center in a Summer Seminar on Freedom and Causality supported by the Andrew W. Mellon Foundation. Wagner read the manuscript of Lehrer (1978) and subsequently solved some mathematical problems of the elementary model. After discussions of philosophical problems associated with that model, Wagner developed the foundations for the extended model. These results were reported in Wagner (1978, 1981a).

Expert Judgement in Risk and Decision Analysis Anca M. Hanea, Gabriela F. Nane, Tim Bedford, Simon French, 2021-02-19 This book pulls together many perspectives on the theory, methods, and practice of drawing judgments from panels of experts in assessing risks and making decisions in complex circumstances. The book is divided into four parts. Structured Expert Judgment (SEJ) current research fronts the contributions of Roger Cooke and the Classical Model he developed, process procedures, and education and applications. After an Introduction by the Editors, the first part presents chapters on expert elicitation of parameters of multinomial models, the advantages of using performance weighting by advancing the random expert hypothesis, expert elicitation for specific graphical models, modelling dependencies between experts' assessments within a Bayesian framework, preventive maintenance optimization in a Bayesian framework, eliciting life time distributions to parametrize a Dirichlet process, and on an adversarial risk analysis approach for structured expert judgment studies. The second part includes Roger Cooke's oration from 1995 on taking up his chair at Delft University of Technology, one of the editors' reflections on the early decade of the Classical Model development, and a current overview of the theory of the Classical Model, providing a deep and comprehensive perspective on its foundations and its application, and an interview with Roger Cooke. The third part starts with an interview with Professor Dame Anne Glover who served as the Chief Scientific Advisor to the President of the European Commission. It then presents chapters on the characteristics of good elicitations by reviewing those advocated and applied, the design and development of a training course for SEJ, and on specific experiences with SEJ protocols with the intention of presenting the challenges and insights collected during these journeys. Finally, the fourth and largest part begins with some reflections from Willy Aspinall on his many experiences in

applying the Classical Model in several application domains it continues with related reflections on imperfect elicitations and then it presents chapters with applications on medicines policy and management supply chain cyber risk management geo political risks terrorism and the risks facing businesses looking to internationalise
