Rett Disorder And The Developing Brain:

Rett Disorder and the Developing Brain Alison Kerr, Ingegerd Witt Engerström, 2001 Rett disorder first described by Andreas Rett in 1966 is a condition which involves the functions on which intelligence and expression depend. It is probably the most common genetic disorder encountered in profoundly intellectually disabled females. Its many manifestations include epilepsy, scoliosis, nutritional difficulties and disorders of mood and movement. This book provides an up to date account of current research into the disorder at a time when the causative mutations have just been discovered on the MeCP2 gene. The first section of the book presents the clinical signs and the latest research into the genetic, neuro-anatomical and neuro-chemical aspects of Rett disorder. The second section moves on to deal with the neuro-physiological research concentrating on the autonomic system which is deeply implicated in the disease mechanisms. The final section of the book examines the behavioural and psychological features of Rett disorder and discusses issues relating to communication. The chapters are written by a distinguished international team of experts all currently active in research. The contributions bring our understanding of the Rett disorder right up to date as the study of the condition moves from an era of description into a time when there are real possibilities for beneficial interventions.

Handbook of Neurodevelopmental and Genetic Disorders in Children, 2/e Sam Goldstein, Cecil R. Reynolds, 2010-10-19 Recognized as the definitive reference in the field, this book addresses a broad range of biologically based disorders that affect children's learning and development. Leading authorities review the genetics of each disorder, its course and outcome, associated developmental, cognitive and psychosocial challenges, and what clinicians and educators need to know about effective approaches to assessment and intervention. Coverage encompasses more frequently diagnosed learning and behavior problems with a genetic component as well as numerous lower incidence neurodevelopmental disabilities. Illustrations include 12 color plates.
