Muggia,Charles W. Young,Stephen K. Carter,2012-12-06 F M MUGGIA When faced with the inadequacies of current cancer treatment we prefer to look at what the future may hold Quite often we take for granted the past preferring research into totally new areas However the persistent development of fertile soil may yield surprising rewards for those who choose to build on the knowledge of the past hence this symposium on anthracycline antibiotics Although the anthracycline antibiotics represent much of the present and future of cancer treatment their actual use c stretches back barely two decades to the pioneering efforts of Aurelio Di Marco who characterized the antitumor properties of daunomycin and adriamycin The clinical application of these two compounds heralded a decade of excitement among oncologists dealing with pediatric tumors breast cancer leukemias and lymphomas and opened new hope for patients afflicted with sarcomas and a variety of other tumors that had been deemed resistant to chemotherapy These successes were tempered with the realization that the antitumor effect of anthracyclines could be achieved at times only at the very high price of risking cardiac decompensation and almost invariably with the occurrence of alopecia and other acute toxicities This record of past achievements and

problems has slowly given way to a present increasingly illuminated by our ability to modify the distressing toxicities of these agents Detailed clinical studies supplemented by ingenious laboratory models have gradually elucidated mechanisms and risk factors implicated in the cardiomyopathy Scientific and Technical Books and Serials in Print ,1989
