It is designed to meet the highest scientific standards but the vocabulary is kept as uncomplicated as possible so that it is fully accessible to the informed gardener and landscape architect as well as to the professional botanists. Although based upon Europe the series will be an extremely useful reference on plants in cultivation throughout the world. Families, genera and species are described, keys are provided and guidance is given on the cultivation of each genus. Volume I is the first in a series of six it contains accounts of the ferns and their allies the conifers and 16 families of monocotyledons including the Liliaceae, Amaryllidaceae and Iridaceae to which most of the popular bulbous garden plants belong. *The Iris Family* Peter Goldblatt, John C. Manning, 2008-01-01 Irises and their relatives are lily like plants related to the orchid and narcissus families with whom they share a propensity for large brightly colored attractive flowers. Many have longlasting flowers. Iris, Gladiolus and Freesia are among the most important cut flower crops in the world. The intricate flowers of the iris family are finely adapted for pollination by a variety of animals including hummingbirds, sunbirds, beetles, butterflies, moths, wasps and bees. This intimate connection between flower form and pollination biology reveals how the marvelous range of flower colors, shapes and scents are vital to the lives of the species. The diversity of Iridaceae is illustrated in more than 200 superb photographs supplemented by expert line drawings. A lifetime of work by the world's expert on Iridaceae is distilled in this definitive account. Botanists, ecologists, naturalists and gardeners will find this an essential reference. *Flora of Australia: Hydatellales to Liliales*, 1981 2nd ed of v 1 updates the original volume and expands the
