Revision Of The Tribe Antirrhineae Scrophulariaceae

David Malcolm Thompson

Revision Of The Tribe Antirrhineae Scrophulariaceae:

A Revision of the Tribe Antirrhineae David Andrew Sutton, 1988 The tribe Antirrhineae includes the Snapdragons and Toadflaxes and belongs to the Figwort family It is the most distinctive tribe of the Scrophulariaceae and is treated in some classifications as an independent family This volume is the first worldwide treatment of this plant group for almost 150 years It draws on a database of about 4 000 plant names and more than 1 300 publications on the taxonomy of the Antirrhineae The descriptions cover 27 genera representing 328 species including 27 new taxa that are detailed here for the first time Also for the first time scanning electron microscopy has made it possible to accurately survey the highly variable seed morphology for the group which provides a rich source of characters for testing existing classifications In addition new methods have been devised by the author for describing the complex morphology of the seeds Major areas of taxonomic controversy discussed in this volume include the generic limitation and supraspecific classification of *Linaria* Nearly 900 photomicrographs and line drawings of new species and subspecies illustrate the text

Flowering Plants Armen Takhtajan, 2009-07-06 Armen Takhtajan is among the greatest authorities in the world on the evolution of plants This book culminates almost sixty years of the scientist's research of the origin and classification of the flowering plants It presents a continuation of Dr Takhtajan's earlier publications including *Systema Magnoliophytorum* 1987 in Russian and *Diversity and Classification of Flowering Plants* 1997 in English In his latest book the author presents a concise and significantly revised system of plant classification Takhtajan system based on the most recent studies in plant morphology embryology phytochemistry cytology molecular biology and palynology Flowering plants are divided into two classes class Magnoliopsida or Dicotyledons includes 8 subclasses 126 orders c 440 families almost 10 500 genera and no less than 195 000 species and class Liliopsida or Monocotyledons includes 4 subclasses 31 orders 120 families more than 3 000 genera and about 65 000 species This book contains a detailed description of plant orders and descriptive keys to plant families providing characteristic features of the families and their differences

The Scrophulariaceae of Eastern Temperate North America Francis Whittier Pennell, 1935 This study was originally planned to follow certain regional papers with a similar account of the family Scrophulariaceae figwort or foxglove family for the Middle Atlantic N Central States But it soon seemed preferable to include the southern Appalachians the whole Atlantic Coastal Plain The flora of the northern states has been profoundly modified by the glacial epoch any understanding of the composition distribution of our northern flora should also consider the adjoining southern territory where vegetation was little or not affected from which the north was again populated So it was decided to include again the South Atlantic the West Gulf States The plan of this study is both more thorough more comprehensive than earlier efforts Illus
