ubiquity and improved efficiency at reduced asset specificity One business application of Internet technologies is the independent business to business Internet based marketplace IBMP on which buyers and sellers can perform service product information and money transactions Due to the early stage of technology adoption the suitability of specific IBMP transactions is often unclear and all those actors involved have to make strategic decisions concerning the way in which future product transactions will be performed With the help of this thesis buyers sellers and marketplace providers can evaluate the transactional suitability of product categories Such an evaluation is of particular importance to small and medium sized enterprises SME They often lack automation and economies of scale Therefore the potential of improved efficiency through Internet technologies is here especially high An exploratory study with the IBMP mundus has allowed for an empirical testing of selected evaluation criteria within selected product categories The final results of the application explain the complexity of the decision situation and the remaining uncertainty due to the early stage of technology adoption
