Sbs0 The Map X4:

Linear Algebra for the Sciences Manuel Benz, Thomas Kappeler, 2023-08-26 This book is based on a course for first semester science students held by the second author at the University of Zurich several times Its goal is threefold to have students learn a minimal working knowledge of linear algebra acquire some computational skills and familiarize them with mathematical language to make mathematical literature more accessible Therefore we give precise definitions introduce helpful notations and state any results carefully worded We provide no proofs of these results but typically illustrate them with numerous examples Additionally for better understanding we often give supporting arguments for why they are valid

Classification Methods for Remotely Sensed Data Taskin Kavzoglu, Brandt Tso, Paul M. Mather, 2024-09-04 The third edition of the bestselling *Classification Methods for Remotely Sensed Data* covers current state of the art machine learning algorithms and developments in the analysis of remotely sensed data This book is thoroughly updated to meet the needs of readers today and provides six new chapters on deep learning feature extraction and selection multisource image fusion hyperparameter optimization accuracy assessment with model explainability and object based image analysis which is relatively a new paradigm in image processing and classification It presents new AI based analysis tools and metrics together with ongoing debates on accuracy assessment strategies and XAI methods New in this edition Provides comprehensive background on the theory of deep learning and its application to remote sensing data Includes a chapter on hyperparameter optimization techniques to guarantee the highest performance in classification applications Outlines the latest strategies and accuracy measures in accuracy assessment and summarizes accuracy metrics and assessment strategies Discusses the methods used for explaining inherent structures and weighing the features of ML and AI algorithms that are critical for explaining the robustness of the models This book is intended for industry professionals researchers academics and graduate students who want a thorough and up to date guide to the many and varied techniques of image classification applied in the fields of geography geospatial and earth sciences electronic and computer science environmental engineering etc

Bifurcation Theory Ale Jan Homburg, Jrgen Knobloch, 2024-12-02 This textbook provides a thorough overview of bifurcation theory Assuming some familiarity with differential equations and dynamical systems it is suitable for use on advanced undergraduate and graduate level and can in particular be used for a graduate course on bifurcation theory The book combines a solid theoretical basis with a detailed description of classical bifurcations It is organized in chapters on local nonlocal and global bifurcations a number of appendices develop the toolbox for the study of bifurcations The discussed local bifurcations include saddle node and Hopf bifurcations as well as the more advanced Bogdanov Takens and Neimark Sacker bifurcations The book also covers nonlocal bifurcations discussing various homoclinic bifurcations and it surveys global bifurcations and phenomena such as intermittency and period doubling cascades The book develops a broad range of complementary techniques both geometric and analytic for studying bifurcations Techniques include normal form methods

center manifold reductions the Lyapunov Schmidt construction cross coordinate constructions Melnikov's method and Lin's method Full proofs of the results are provided also for the material in the appendices This includes proofs of the stable manifold theorem of the center manifold theorem and of Lin's method for studying homoclinic bifurcations *Recent Advances in Chaotic Systems and Synchronization* Olfa Boubaker, Sajad Jafari, 2018-11-05 *Recent Advances in Chaotic Systems and Synchronization From Theory to Real World Applications* is a major reference for scientists and engineers interested in applying new computational and mathematical tools for solving complex problems related to modeling analyzing and synchronizing chaotic systems Furthermore it offers an array of new real world applications in the field Written by eminent scientists in the field of control theory and nonlinear systems from 19 countries Cameroon China Ethiopia France Greece India Italia Iran Japan Mexico and more this book covers the latest advances in chaos theory along with the efficiency of novel synchronization approaches Readers will find the fundamentals and algorithms related to the analysis and synchronization of chaotic systems along with key applications including electronic design text and image encryption and robot control and tracking Explores and evaluates the latest real world applications of chaos across various engineering and biomedical engineering fields Investigates advances in chaos synchronization techniques including the continuous sliding mode control approach hybrid synchronization between chaotic and hyperchaotic systems and neural network synchronization Presents recent advances in chaotic systems through an overview of new systems and new properties

Analysis and Synthesis of Logics Walter Carnielli, Marcelo Coniglio, Dov M. Gabbay, Paula Gouveia, Cristina Sernadas, 2008-01-22 Starting with simple examples showing the relevance of cutting and pasting logics the monograph develops a mathematical theory of combining and decomposing logics ranging from propositional and first order based logics to higher order based logics as well as to non truth functional logics The theory covers mechanisms for combining semantic structures and deductive systems either of the same or different nature for instance two Hilbert calculi or a Hilbert calculus and a tableau calculus The important issue of preservation of properties is extensively addressed For instance sufficient conditions are provided for a combined logic to be sound and complete when the original component logics are known to be sound and complete The book brings the reader to the front line of current research in the field by showing both recent achievements and directions of future investigations in particular multiple open problems It also provides examples of potential applications in emergent fields like security protocols quantum computing networks and argumentation theory besides discussing more classical applications like software specification knowledge representation computational linguistics and modular automated reasoning This monograph will be of interest to researchers and graduate students in mathematical logic theory of computation and philosophical logic with no previous knowledge of the subject of combining and decomposing logics but with a working knowledge of first order logic The book will also be relevant for people involved in research projects where logic is used as a tool and the need for working with several logics at the same time is mandatory for instance
