Wilson, 2006-07-27 Rob Milne was a remarkable man He died of a heart attack on the 5th of June 2005 while climbing Mount Everest in Nepal Milne 48 lived an active life combining his three careers seemingly effortlessly He was a hi tech entrepreneur an AI researcher and a passionate mountaineer Mount Everest was last on his list of the highest summits on each continent He was only 400 meters from the top when he died This publication commemorates and celebrates the life of Rob Milne It covers all facets of Rob Milne s life and contains contributions by the people who have known him well and pay tribute to his life and his legacy Rob Milne is survived by his wife Val and his two children Alex and Rosemary After he died his wife said in a radio interview Rob died at the top doing what he loved **SCAI '97** G. Grahne, 1997 The major theme of this book is Intelligent Agents An agent is a hardware or software system that is autonomous interactive with and reactive to its environment and other agents An agent can also be pro active in taking the initiative in goal directed behaviour Intelligent Agents are one of the most important and exciting areas of research and development in computer science today **Seventh Scandinavian Conference on Artificial Intelligence** Henrik Hautop Lund, B. H. Mayoh, John W. Perram, 2001 The 7th Scandanavian Conference on Artificial Intelligence held at the Maersk McKinney Moller Institute for Production Technology at the University of Southern Denmark Odense in Feb 2001 continued a tradition established by SCAI of being an important conference in Europe It attracted submissions from all over the world Contents include robotics sensor motor intelligence evolutionary robotics behaviour based systems multi agent systems applications of AI in bioinformatics soft computing and heuristic algorithms where paradigms from nature are used to build learning and optimization systems and control and optimization *Tenth Scandinavian Conference on Artificial Intelligence* A. Holst, P. Funk, P. Kreuger, 2008-05-19 The Scandinavian Conference on Artificial Intelligence continues a tradition of being one of the most important regional AI conferences in Europe for ten years now The topics of this year s contributions have a broad range from machine learning knowledge representation robotics planning and scheduling natural language computer vision search algorithms industrial applications to philosophical foundations These contributions exemplify the diversity of research in artificial intelligence today and confirm the achievement and magnitude of 25 years AI research in Scandinavia In this tenth edition there will be an overview of the past present and future of artificial intelligence Furthermore attention will be paid to the industrial aspects of artificial intelligence and the impressions from Swedish AI through the years Other topics discussed are biosurveillance and an elaboration on probabilistic modelling and learning in a relational world Information System Concepts: An Integrated Discipline Emerging Eckhard D. Falkenberg, Kalle Lyytinen, Alexander A. Verrijn-Stuart, 2013-03-09 This volume contains the invited paper the reviewed research papers the discussants comments on the latter and the workshop memoranda of the fourth IFIP WG 8.1 International Working Conference on Information System

Concepts with the subtitle An Integrated Discipline Emerging ISCO4 It was held in Leiden The Netherlands 20 22 September 1999 The previous three ISCO conferences were subtitled An In depth Analysis Improving the Understanding and Towards a Consolidation of Views Their proceedings were published in 1989 1992 and 1995 respectively The ISCO conferences were instigated by the former Task Group FRISCO an acronym for FRamework of Information System Concepts charged by the IFIP Working Group 8.1 with the task of proposing a conceptual framework for the information system field Its report entitled A Framework of Information System Concepts the FRISCO Report for short is available on the World Wide Web via the address <http://www.wi.leidenuniv.nl/verrynstlfrisco.html> or may be downloaded directly as a condensed Word 6 file from <ftp://ftp.leidenuniv.nl/pub/rullfri/full.zip> The FRISCO Report forms a significant contribution to the long lasting quest of our community towards developing a scientific outlook on the field of information systems Clarifying the varied nature of many diverging views some of which may not easily be reconciled the report does propose a coherent consistent and partially formalised framework of concepts

Eighth Scandinavian Conference on Artificial Intelligence Bjørnar Tessem, 2003 The Eighth Scandinavian Conference on Artificial Intelligence continues a tradition of being one of the most important regional AI conferences in Europe Keith Downing focuses on the low road to artificial intelligence that is the development of AI through evolutionary artificial life approaches The topics of the accepted papers range from multi agent systems robots natural languages and machine learning to general knowledge based systems and formal approaches to AI This collection of papers together exemplifies the diversity of research in artificial intelligence today Two of the invited speakers both focus on vision although each from slightly different viewpoints One considers biological models for vision and its consequences for artificial vision whereas the other considers the relation between real world objects and their internal representation in robots The last keynote speaker presents answer set programming a new idea for declarative programming

Connectionist-symbolic Integration Ron Sun, Frederic Alexandre, 1997 This book is concerned with the development analysis and application of hybrid connectionist symbolic models in artificial intelligence and cognitive science

Thirteenth Scandinavian Conference on Artificial Intelligence S. Nowaczyk, 2015-11-06 Artificial intelligence AI has featured widely in the news recently It is vital to the continued development of computer science and informatics and is indispensable for the effective functioning of a multitude of systems in fields such as medicine economics linguistics philosophy psychology and logical analysis as well as industry This book presents the proceedings of the 13th Scandinavian Conference on Artificial Intelligence SCAI 2015 held in Halmstad Sweden in November 2015 SCAI is the main biennial conference for the AI research communities of Scandinavia but also attracts the attendance of a wide range of international participants The book features 17 accepted papers from the conference as well as extended abstracts describing the work of six Ph D students who presented their research in progress to a panel of experts in the doctoral symposium which forms part of the conference A wide range of topics are covered including machine learning data mining logical reasoning robotics and

planning and the papers included here focus on both the theory and practical applications of AI The book will be of interest to all those wishing to keep abreast of the latest developments in the field of AI Rough Sets, Fuzzy Sets, Data Mining, and Granular Computing Dominik Ślęzak, 2005 This volume contains the papers selected for presentation at the 10th International Conference on Rough Sets Fuzzy Sets Data Mining and Granular Computing RSFDGrC 2005 organized at the University of Regina August 31st September 3rd 2005 Encyclopedia of Library and Information Science Allen Kent, 2000-09-21 This is the 68th volume supplement 31 in a series which examines library and information science

Methods and Applications of Intelligent Control S.G. Tzafestas, 2012-12-06 This book is concerned with Intelligent Control methods and applications The field of intelligent control has been expanded very much during the recent years and a solid body of theoretical and practical results are now available These results have been obtained through the synergetic fusion of concepts and techniques from a variety of fields such as automatic control systems science computer science neurophysiology and operational research Intelligent control systems have to perform anthropomorphic tasks fully autonomously or interactively with the human under known or unknown and uncertain environmental conditions Therefore the basic components of any intelligent control system include cognition perception learning sensing planning numeric and symbolic processing fault detection repair reaction and control action These components must be linked in a systematic synergetic and efficient way Predecessors of intelligent control are adaptive control self organizing control and learning control which are well documented in the literature Typical application examples of intelligent controls are intelligent robotic systems intelligent manufacturing systems intelligent medical systems and intelligent space teleoperators Intelligent controllers must employ both quantitative and qualitative information and must be able to cope with severe temporal and spatial variations in addition to the fundamental task of achieving the desired transient and steady state performance Of course the level of intelligence required in each particular application is a matter of discussion between the designers and users The current literature on intelligent control is increasing but the information is still available in a sparse and disorganized way *Rough Sets in Knowledge Discovery 2* Lech Polkowski, 2013-03-14 The papers on rough set theory and its applications placed in this volume present a wide spectrum of problems representative to the present stage of this theory Researchers from many countries reveal their recent results on various aspects of rough sets The papers are not confined only to mathematical theory but also include algorithmic aspects applications and information about software designed for data analysis based on this theory The volume contains also list of selected publications on rough sets which can be very useful to every one engaged in research or applications in this domain and sometimes perhaps unaware of results of other authors The book shows that rough set theory is a vivid and vigorous domain with serious results to its credit and bright perspective for future developments It lays on the crossroads of fuzzy sets theory of evidence neural networks Petri nets and many other branches of AI logic and mathematics These diverse connections seem to be a very fertile feature of rough set

theory and have essentially contributed to its wide and rapid expansion. It is worth mentioning that its philosophical roots stretch down from Leibniz, Frege and Russell up to Popper. Therefore many concepts dwelled on in rough set theory are not entirely new; nevertheless the theory can be viewed as an independent discipline on its own rights. Rough set theory has found many interesting real life applications in medicine, banking industry and others.

Rough Sets, Fuzzy Sets, Data Mining, and Granular Computing Dominik Slezak, JingTao Yao, James F. Peters, Wojciech Ziarko, Xiaohua Hu, 2005-09-14

This volume contains the papers selected for presentation at the 10th International Conference on Rough Sets, Fuzzy Sets, Data Mining and Granular Computing (RSFDGrC 2005) organized at the University of Regina, August 31st - September 3rd 2005. This conference followed in the footsteps of international events devoted to the subject of rough sets held so far in Canada, China, Japan, Poland, Sweden and the USA. RSFDGrC achieved the status of biennial international conference starting from 2003 in Chongqing, China. The theory of rough sets proposed by Zdzisław Pawlak in 1982 is a model of approximate reasoning. The main idea is based on indiscernibility relations that describe indistinguishability of objects. Concepts are represented by approximations. In applications, rough set methodology focuses on approximate representation of knowledge derivable from data. It leads to significant results in many areas such as finance, industry, multimedia and medicine. The RSFDGrC conferences put an emphasis on connections between rough sets and fuzzy sets, granular computing and knowledge discovery and data mining both at the level of theoretical foundations and real life applications. In the case of this event, additional effort was made to establish a linkage towards a broader range of applications. We achieved it by including in the conference program the workshops on bioinformatics, security engineering and embedded systems as well as tutorials and sessions related to other application areas.

Scandinavian Conference on Artificial Intelligence 89 Hannu Jaakkola, S. Linnainmaa, 1989

Incomplete Information: Rough Set Analysis Ewa Orłowska, 2013-03-14

In 1982 Professor Pawlak published his seminal paper on what he called rough sets, a work which opened a new direction in the development of theories of incomplete information. Today a decade and a half later the theory of rough sets has evolved into a far reaching methodology for dealing with a wide variety of issues centering on incompleteness and imprecision of information, issues which play a key role in the conception and design of intelligent information systems. *Incomplete Information: Rough Set Analysis* or RSA for short presents an up to date and highly authoritative account of the current status of the basic theory, its many extensions and wide ranging applications. Edited by Professor Ewa Orłowska, one of the leading contributors to the theory of rough sets, RSA is a collection of nineteen well integrated chapters authored by experts in rough set theory and related fields. A common thread that runs through these chapters ties the concept of incompleteness of information to those of indiscernibility and similarity.
